1. The three major indexes rose across the board, but the volume was insufficient. How to deal with the operation?
2. Smart Investment Strategy No. 4 Plan Portfolio Analysis.
3. The crypto market pulled back as expected. How to deal with it next?

Good morning, team! I am Milton Reese, your old friend. At this special moment, as Thanksgiving is approaching, I would like to take this opportunity to express my deepest gratitude to everyone who has always supported and trusted the business school community. Thank you for your company and trust, which has enabled us to inspire each other and make progress together on the road of growth. You are not only members of the business school community, but also the driving force and inspiration that drives us forward.

Thanksgiving is a day full of warmth and love, and we also hope to convey our gratitude with practical actions. For this reason, we will give this special gift back to every friend in the community through EVW tokens. It is not only an asset, but also a commemoration, witnessing every bit of our journey together. I hope it can be the starting point of your investment journey and the bond that connects our friendship. Here, I wish you all a happy Thanksgiving in advance! May everyone be able to harvest full warmth and happiness in this holiday and share good times with family and friends. Let us continue to work together with a grateful heart to create a more brilliant future!

As the internal testing of Vanguard AI 4.0 continues to advance, the stability and accuracy of this system have achieved remarkable breakthroughs. Through in-depth testing, we have not only verified the short-term explosive power of the target, but also proved its excellent performance in terms of medium- and long-term stability. So far, the accuracy of the selected targets has reached more than 95%, which is not just a set of numbers, but also the best proof of the accuracy and reliability of Vanguard AI 4.0.

What's more worth mentioning is that Vanguard AI 4.0 not only has unparalleled market prediction capabilities, but also provides investors with strong data support and profound market insights. With the continuous optimization of Vanguard AI 4.0, we will conduct comprehensive testing on advanced trading strategies such as options and contracts next week to further verify its efficient applicability in multiple fields. Once the test is completed, we will officially launch the millionaire training camp of the asset multiplication plan in December, and use Vanguard AI 4.0 as the core tool to help implement this plan. The plan will last until March 2025, during which time we will do our best to help every participant double their assets.

**EVW Business**

I firmly believe that with the accurate trading signals and stable performance of Vanguard AI 4.0, whether you are a new investor or an experienced veteran, no matter how big your capital is, you will find your opportunity under our focused options and contract trading strategies. Through the guidance of this system, every participant has the possibility to move towards the goal of "millionaires and billionaires" and achieve true wealth freedom! Friends, this is not only an opportunity to increase wealth, but also an important step to open the door to financial freedom with the help of Vanguard AI 4.0. Are you ready? The future is in front of us, let us work together to create a more brilliant tomorrow! Friends, this is not only an opportunity to increase wealth, but also an important step to open the door to financial freedom with the help of Vanguard AI 4.0. Are you ready? The future is in front of us, let us work together to create a more brilliant tomorrow!

However, as the saying goes, "there is no free lunch in the world", gains are always accompanied by efforts. If you agree with our goals and mission, voluntarily donate 15% of the profits to the Business School Community Fund after successfully achieving the profit target. The fund will be used to promote community collaboration, talent cultivation and social welfare, promote the continuous growth of the business school, and create more value for the society. As we all know, a strong community needs good operational support, and our business school team also needs funds to continuously optimize services and further expand the scale of public welfare projects. This model is not only about sharing wealth, but also about transferring value, so that the efforts and success of each participant can contribute to the community and even the society. If you have the same vision as us - focusing on personal wealth growth and committed to the common progress of society, we sincerely invite you to join the millionaire training camp of the asset multiplication plan. This is an opportunity to achieve financial goals, but also a journey to create a positive impact on society. Join our asset multiplication plan millionaire training camp. Let every investment of yours not only become an engine for wealth growth, but also a bridge to convey love and hope!

Some specific details are as follows: In order to ensure the orderly progress of the millionaire training camp of the Asset Multiplication Plan and support the long-term sustainable development of the business school, after the end of the millionaire training camp of the asset multiplication plan, participants voluntarily donate 15% of their profits to the business school community fund. The fund will be used to promote community collaboration, talent training and social welfare:

30%: As a reward to group leaders to thank them for their hard work and guidance.

40%: Support the development of talented traders and help them fully realize their potential.

10%: Donate to charity to show the business school community's active commitment to social responsibility.

20%: Used to organize community gatherings and activities to strengthen connections between members. For example, when Vanguard AI 4.0 is launched in April next year, we will hold a variety of activities to celebrate this important moment together.

This initiative not only embodies the spirit of sharing and win-win, but also demonstrates the power of gratitude. It allows us to help others and create positive impacts while achieving

**EVW Business**

**School**

personal growth. Gratitude is a connecting force, through which we cherish every opportunity to work together and celebrate collective achievements. Let us build a future full of prosperity, connection and meaning with a grateful heart. In this journey, every achievement comes from the support of each other, and every success shines brighter because of gratitude!

Yesterday, the three major U.S. stock indexes rose across the board, once again showing the strong resilience of the market. The Dow Jones and S&P 500 both hit record highs, and the Nasdaq continued its recent upward trend, further boosting market optimism. However, small-cap stocks performed relatively poorly, and the Russell 2000 index fell slightly, reflecting signs of capital rotation among different sectors. At the same time, the VIX panic index fell further to 14.10, indicating that market sentiment has stabilized. However, the VIX panic index has reached its previous low and may rebound strongly at any time. As shown in the figure below. Moreover, the obvious lack of volume during the rise of the three major indexes is worthy of attention. This shows to a certain extent that investors are cautious about the future market. In addition, the index is fluctuating at a high level and the rotation of sectors is accelerating. This phenomenon has further increased the difficulty of making money, reminding us that in the current complex market environment, we need to remain calm and strategically layout.

At the same time, some macro news provided short-term support to the market, but risks and concerns cannot be ignored. The U.S. consumer confidence index reached a two-year high in November, and the labor market performed strongly, which boosted market sentiment in the short term. However, consumers' expectations for future income and business conditions declined slightly, indicating that market confidence is not completely solid. In addition, the minutes of the Federal Reserve meeting showed that future interest rate cuts will be gradual, but the uncertainty of the neutral interest rate and the complexity of policy adjustments still make the path of monetary policy uncertain. In terms of geopolitics, the conclusion of the ceasefire

**EVW Business**

**School**

agreement between Lebanon and Israel eased the tension in the Middle East and injected some stability into the market, but long-term risks have not been completely eliminated. Against the backdrop of high-level fluctuations in U.S. stocks and accelerated sector rotation, market concerns about high-valuation sectors continue to heat up. Investors need to be alert to potential callback risks and focus on the upcoming core inflation data and the Federal Reserve's policy trends to provide solid support for subsequent investment decisions.

Next, let's take a look at the investment portfolio of Smart Investment Strategy Plan No. 4: MU: For those who bought yesterday, they may be in a small loss. From a technical point of view, MU's stock price fell back to the key MA62 daily moving average yesterday, which is the most important support level at present, indicating that the bulls and bears have launched a fierce game at this position. However, the stock price still remains above the MA62 daily moving average, and the MA25 and MA62 daily moving averages maintain a golden cross state, indicating that the medium-term trend is still healthy and positive. In addition, the MACD indicator shows that the DIF line is close to crossing the DEA line, and the red volume column is gradually shortening, indicating that the market momentum is gradually improving, which is usually a signal of a short-term rising market. Next, we need to focus on whether the stock price can break through the key resistance level with the cooperation of the increase in trading volume, which will lay the foundation for further opening up the upward space and may usher in a new round of trend rise. Therefore, it is recommended to hold patiently and wait for the market to further confirm the signal.

EVW: For those who bought yesterday, they have realized a profit of about 10%. From the technical trend, the EVW token successfully broke through the previous high and completed an effective retracement confirmation, releasing a strong bullish signal, showing that the market sentiment continues to be positive, the trend is steadily improving, and the future upside is still

**EVW Business**

**School**

worth looking forward to. However, what is more worthy of attention is the medium- and long-term growth potential of the EVW token. With the continuous advancement of Vanguard AI 4.0 testing and the official launch of the commercialization process in the later stage, this powerful quantitative trading system will significantly enhance the market application and liquidity of the EVW token, and become the core driving force for the rapid growth of its value. This key measure will continue to boost the price of the EVW token and further broaden its growth space. The future performance may exceed expectations and bring you unexpected surprises. For friends who currently hold EVW, this is not only a reflection of short-term gains, but also a rare opportunity for medium- and long-term wealth appreciation. It is recommended to continue holding and patiently wait for greater value release.

The recent trend of the Bitcoin market fully verifies the analysis made last Friday. After failing to effectively break through the important psychological barrier of \$100,000, the price fell back from last week's highest of \$99,800 to nearly \$90,000, and then rebounded strongly. At present, contract trading can be carried out in the range of \$90,000 to \$100,000, with \$90,000 as an important support level and \$100,000 as a key pressure level. From the 4-hour chart, the rebound is strong and accompanied by an increase in trading volume. The DIF line of MACD has crossed the DEA line to form a golden cross. In the short term, we need to pay attention to whether the price can stand firm on the MA62 moving average to reverse the weak pattern. Overall, this callback is a normal adjustment. The market accumulates momentum through consolidation to prepare for breaking through the historic barrier of \$100,000 in the future.

Therefore, for spot traders, it is recommended to patiently wait for the layout opportunity after a full correction and avoid blindly chasing high prices to reduce unnecessary risks caused by chasing high prices. For contract traders, the recent market fluctuations provide more flexible operation possibilities. Since contract trading has the advantages of long and short two-way operations, it can not only seize the opportunity of rising, but also profit from falling. Therefore, no matter how the market trends, as long as there is a clear trend space, you can find opportunities for profit.

If you need more accurate real-time trading signals or strategy support, please feel free to contact the assistant for professional guidance to ensure that every step of the operation is more reliable and secure. Whether you choose spot or contract trading, strict implementation of risk control strategies and trading discipline is always the core principle of success. I hope that everyone can make steady profits with calm judgment and keen insight in this rapidly changing market, and move towards a future of wealth appreciation together! That's all for today's sharing. Looking forward to Michael's sharing this afternoon.

1. Smart Investment Strategy Plan No. 4 Portfolio Analysis.
2. Technical Sharing: How to Predict Price Ranges Using Bollinger Bands?

Ladies and gentlemen, good afternoon! I am Michael. Tomorrow is the annual Thanksgiving Day, a time of gratitude and reunion. On the eve of this special day, I am very honored to stand here and share with you my experience on the investment road. Thanksgiving is not only a time to express gratitude, but also a reminder for us to give back to those who have helped us with practical actions, and to thank those who have given meaning and guidance to our lives. In such a moment full of gratitude, I would like to express my deep gratitude to everyone here - thank you for your trust in the community, thank you for your support, and thank you for our common pursuit of growth goals. At the same time, I would also like to thank Professor Reese, the founder of the business school, for his help. Without his guidance, I would not have achieved my small achievements on the investment road today; without his guidance, I would not have the opportunity to stand here and share my experience with you. I hope that today's sharing can bring you inspiration and strength, and add a hope and harvest to the upcoming holiday season.

I am looking forward to the upcoming Asset Multiplication Program Millionaire Training Camp! Since I met the professor, I have actively participated in every training camp. For me, this is not only an opportunity to learn, but also a journey to challenge myself and surpass my limits. These valuable experiences have greatly improved my continuous growth and breakthroughs, and my love and mastery of short-term swing trading have added many highlights and wonderful chapters to my investment journey.

I still remember that in the last training camp, I successfully achieved a leap from 5 million to 40 million, setting an amazing 700% return rate! This is not only a leap in wealth, but also a perfect embodiment of the correct investment strategy and resolute execution. What I am looking forward to even more is that this time we will join hands with Vanguard AI 4.0, a precise and stable trading signal support system. Its addition will undoubtedly inject new power into our investment strategy, helping us to deal with market fluctuations in a more scientific, calm and efficient way and amplify our profit potential.

This Asset Multiplication Plan, the millionaire training camp, is not only an opportunity to grow wealth, but also an extraordinary journey to redefine investment thinking and tap into one's own potential. It not only teaches us how to optimize returns, but also shapes our investment mentality and strategy, allowing everyone to achieve true transformation.

I sincerely hope that every friend can seize this rare opportunity. Believe me, as long as you have participated in the Asset Multiplication Plan Millionaire Training Camp, your investment ability,

**EVW Business**

**School**

market vision and operational confidence will achieve a qualitative leap. Whether it is the improvement of skills, the doubling of income, or the maturity of mentality, this experience will become a meaningful part of your life. Looking to the future, I firmly believe that each of us will write our own glorious chapter on this investment road! Join us and join the P Multiplication Plan Millionaire Training Camp. With faith, decisive action, wisdom and courage, let's start this unprecedented wealth growth journey together!

Although the three major indexes rose yesterday, the trading volume was obviously insufficient, indicating that the capital wait-and-see sentiment was strong and the market rise lacked solid momentum. This "volumeless rise" market often indicates that the market lacks sustainability and it is difficult to see a significant breakthrough in the short term. Today, the three major indexes opened lower as expected, and the VIX panic index rebounded strongly, indicating that the market's expectations for future volatility have increased significantly. Against this background, the difficulty of market operations has increased significantly, especially for technology stocks, which are currently at a relatively high level and the pressure is becoming more and more apparent. As the leader of AI, Nvidia's stock price has been continuously adjusted since it announced its earnings report that exceeded expectations last week. This trend of "all good news is bad news" reflects the market's lack of confidence in the continued speculation of high-valuation sectors. Nvidia's performance also reflects the current difficulties faced by the AI sector as a whole. Although the long-term trend is positive, the market's expectations for further outbreaks in the basic layer of AI (such as chips) have weakened at this stage, and more attention is shifting to the AI application layer, which means that the AI track may enter a period of shock consolidation in the short term. At the same time, other technology stocks are also affected. The sensitivity of the high-valuation sector to interest rates makes it more vulnerable to pressure when the expectation of interest rate cuts is delayed.

Overall, in a market with rising volatility and obvious divergence of funds, we need to pay more attention to changes in volume, sector rotation, and the performance of key support levels. At the same time, we need to properly control positions and flexibly adjust strategies to cope with the challenges brought by high-level corrections and market uncertainties.

Smart Investment Strategy Plan No. 4 Investment Portfolio: MU and EVW. The Smart Investment Strategy Plan No. 4 that we established positions yesterday is shown in the figure below, which are the daily charts of MU and EVW. MU's correction today is relatively strong, and the stock price directly fell below the MA62 moving average. The short-term technical side has weakened, and the important support level 1 in the figure will be tested next. If the support level is effective and stabilized, the stock price is expected to stop falling and rebound; at the same time, it is necessary to pay close attention to whether the stock price can break through the MA62 moving average again, which will be a key signal for the subsequent upward momentum. At this stage, it is necessary to focus on the effectiveness of the support level and the changes in volume.

Compared with the weak performance of MU, I am more optimistic about the future trend of EVW tokens. Yesterday, I suggested that everyone focus on and actively build positions in EVW, and the market performance did not disappoint expectations: in just two days, EVW has brought more than 15% of returns, showing an outstanding strong performance. In sharp contrast to MU's losses, EVW has shown significant growth potential in the short term. It is worth noting that in the market environment of BTC stagflation, funds tend to flow to small-cap tokens with potential. BTC is currently oscillating in a key range, and its momentum is gradually weakening, which provides EVW with an excellent performance opportunity. EVW has not only attracted more attention from funds, but also its technical performance is quite impressive.

From a technical perspective, as shown in the above chart, EVW's Bollinger Bands show a clear upward trend, and the opening is expanding, which indicates that the upward momentum is gradually accumulating. With the continuous inflow of market funds and the further strengthening of technical signals, EVW is expected to continue to maintain a strong trend in the future and bring us more substantial returns.

Today I want to share with you a technical indicator that I often use for swing trading - Bollinger Bands. Some friends may not know much about Bollinger Bands. In short, it is an extremely practical and easy-to-use technical indicator, which is widely used by many professional traders around the world. Today, I will take you to know the first basic function of Bollinger Bands: judging the dynamic space of price operation. Mastering this function can help you make a preliminary judgment on the trend of any investment target.

1. The core of technical analysis lies in solving two key problems: timing and space, that is, determining the appropriate buying and selling points and predicting the price fluctuation range.
2. Regardless of the trading variety or cycle level, in most cases, the price will fluctuate between

**EVW Business**

**School**

the upper and lower rails of the Bollinger Bands. Through the Bollinger Bands, you can roughly judge the price fluctuation range, thereby effectively solving the problem of space prediction.

As shown in the chart, we can call up the Bollinger Band indicator in any stock-watching and trading software. Since the price is running within the Bollinger Band track most of the time, can we preliminarily judge the approximate running space of the price? For example, the buy point B and sell point S in the figure. In trading, it is very important to predict the running space of the price. By predicting the potential rise or fall of the price, we can better determine when to enter the market (buy) and when to leave the market (sell). This helps to optimize profits and reduce losses, and its guiding role in stock prices in trading is very referenced.

Technical analysis without practical guidance is worthless, so combining training with actual combat is the key to achieving real benefits. As can be seen from the figure, on the daily chart of MU, short-term buying points often appear at the lower track of the Bollinger Bands, while the upper track is the ideal position for short-term selling points. For short-term traders, this provides an important reference. For mid-term traders, paying attention to the Bollinger Bands indicator at the weekly level can grasp the trend more accurately, which is simple and practical. At present, MU's Bollinger Bands are flat and shrinking, and the stock price has experienced a sharp correction and is fluctuating at the bottom. At this time, it is recommended to wait patiently for the upward expansion of the Bollinger Bands. At the same time, the stock price is close to the lower Bollinger Band at the bottom. Keep holding patiently and wait for the opportunity for the market to reverse.

The use of Bollinger Bands can be adjusted according to different stages of the market, mainly divided into shock period, rising period and falling period. Just now, MU was used as an example, which is an obvious falling period. In the rising period, each callback will usually be supported by the middle Bollinger band, but if the price falls below the middle band and the unilateral rising trend has not changed, the lower Bollinger band can become an ideal buying point, provided that the overall rising trend is not destroyed. In the rising period, as shown in the figure above, when the price falls back to the middle band below the upper Bollinger band for the first time after forming an upward cycle and successfully stands firm, it usually continues to rise sharply. At this time, the Bollinger Bands can help confirm the support level and rebound timing, providing traders with reliable buying signals.

As shown in the above chart, this is the daily chart of the U.S. dollar trend. During the oscillation cycle, the use of Bollinger Bands is particularly effective. Traders can rely on the upper and lower rails of the Bollinger Bands to buy low and sell high, thereby improving the accuracy of swing trading. However, it should be noted that any single indicator can only be used as a reference. The key to truly improving the winning rate lies in the reasonable use of multiple indicators. By combining different technical analysis tools, we can more comprehensively judge the market trend and make more well-founded trading decisions.

When many of us invest in stocks, it is easy to make mistakes such as buying stocks when the price is at a high point, and selling stocks that make money at a loss. When we understand the role of Bollinger Bands in judging the dynamic space of prices, if we learn our trading system, we don't have to worry about such problems at all. A simple technical point can connect important investment views. When we understand more knowledge points of Bollinger Bands, everyone can quickly become a practical master!

In the crypto market, the current trend of Bitcoin is mainly in the range of \$90,000-100,000. This stage is mainly based on buying low and selling high, and performing interval band operations to capture short-term profits. However, once the integer mark of \$100,000 is broken, the market will likely enter a unilateral trend, further pushing prices up. Therefore, at this critical position, traders should pay close attention and be prepared to respond after the breakthrough. That's all for today, Happy Thanksgiving!

#### Today's questions

1. Regarding the millionaire training camp in the Asset Multiplication Plan, after achieving the goal, what percentage of the profit do we need to donate to the business school community fund? (10 points)
2. Which investment portfolio of the Smart Investment Strategy Plan No. 4 do you prefer? (10 points)
