Topics:

1. The three major indexes fell across the board on Wednesday. What should we do next?
2. Smart Investment Strategy Plan No. 4 Portfolio Analysis.
3. The long and short directions of the crypto market are about to be established. Are you ready?

Good morning, team! I'm Milton Reese, your old friend. This Thanksgiving, I spent a wonderful time full of love and warmth. My son and daughter brought their children home, and our family sat around the dining table, sharing a sumptuous dinner, and laughter filled the whole room. The grandchildren innocently played around me, calling "Grandpa", and the crisp call seemed to dispel all the fatigue and made my heart overflow with emotion. And my wife smiled and added food for everyone, and the happiness in her eyes made this moment even more warm and precious. The company of the children and the laughter of the grandchildren made every corner of the house full of endless joy. Such ordinary times contain the deepest meaning in life. The true value of Thanksgiving lies in this - gathering with the loved ones, recalling the good times of the past, and feeling the power of love and gratitude together. This makes me more convinced that no matter how magnificent the journey of life is, the most valuable thing is always the warmth of being with family.

The warmth of Thanksgiving also made me recall every bit of my investment journey over the years, and I was filled with emotion. In the days of confusion and bewilderment, I received selfless help and guidance from many friends. When I was at my lowest point, they provided me with valuable advice, support and encouragement, which helped me to pick myself up and find the direction to move forward. It was this help that allowed me to gradually grow, learn to control the ups and downs of the market in investment, and achieve today's results. I always remember these favors in my heart and am grateful to every friend who has helped me along the way.

Because of this, I hope to pass on my investment experience and wisdom to more people in need. This is also the original intention of my founding the business school to provide direction and guidance for those who are confused on the road of investment, to help them get out of trouble and achieve their goals and dreams. At the same time, I would like to sincerely thank every friend in the community for your trust and support for me and the business school. It is because of your company that I feel deeply warmed, and it also makes me more determined to fulfill my mission to continue this love and help and benefit more people. Help more people realize their investment dreams and create a better future together!

Here, I would like to remind friends who have not signed up for the Asset Multiplication Plan—Millionaire Training Camp to seize this rare opportunity! This is an important annual event of our business school. It is not only a comprehensive improvement of investment skills, but also an excellent opportunity to achieve a leap in life. This year, we have specially added the powerful system support of Vanguard AI 4.0, whose high accuracy and stability will bring unprecedented profit growth experience to the participants of the training camp. At the same time, the options

EVW Business

School

and contract trading tests to be carried out next week will make final preparations for the full launch of the Asset Multiplication Plan—Millionaire Training Camp. These tests are not only an important part of strategy optimization, but also a key step to provide everyone with a more complete practical experience. I believe that this training camp will be the beginning of our journey to the peak of wealth! Looking forward to meeting you in the training camp and jointly opening up our brilliant future!

As shown in the chart, these data show the results of some targets recently tested by our business school through the Vanguard AI 4.0 signal system. Careful friends may have noticed that the targets tested this time mainly focus on two core directions: artificial intelligence (AI) and cryptocurrency. From the overall performance point of view, the test results are very impressive, especially the targets related to the crypto market have achieved excellent results. Please refer to the chart for specific profit and loss data, I will not repeat them here. The profit and loss data shown in the figure is the most powerful proof of this Vanguard AI 4.0 trading system worth more than 100 million US dollars! With an amazing accuracy of more than 95% and excellent stability, this system has demonstrated unparalleled advantages in a complex and changing market environment. What is even more exciting is that Vanguard AI 4.0 is still being iterated and upgraded, and its accuracy and efficiency continue to improve, which will bring us more stable and rich returns. All this is not only a technological breakthrough, but also an important achievement of the business school to empower investors. We firmly believe that Vanguard AI 4.0 will bring more possibilities for future asset growth and help everyone reach new heights on the road of investment!

VANGUARD AI 4.0

It is not difficult to see from the profit and loss data that Vanguard AI 4.0 not only performs well in accuracy, but also has impressive stability. This trading system, which is worth over 100 million US dollars, has not only created amazing results for many investors, but is also being continuously optimized. With the continuous upgrading of the system, we will fully test advanced trading strategies such as options and contracts next week to further verify its efficient applicability in multiple fields. This will make the final preparations for the full launch of the Asset Multiplication Plan—Millionaire Training Camp.

In this training camp, we will introduce Vanguard AI 4.0, a revolutionary trading system, for the first time to empower every participant. I firmly believe that with the accurate trading signals and excellent stable performance of Vanguard AI 4.0, whether you are a novice in the investment field or a veteran, and whether you have a large or small amount of funds, you can find the best opportunity for you under the guidance of our carefully designed strategies. Through the guidance of this system, every participant will have the opportunity to move towards the goal of becoming a millionaire or even a billionaire and achieve true wealth freedom.

EVW Business

School

On Wednesday, the three major U.S. stock indexes fell across the board, and market sentiment fell. The Dow Jones ended its five-day winning streak and closed down 0.31%; the S&P 500 fell 0.38%; and the Nasdaq fell 0.60%, the largest single-day drop in nearly a week. This performance was mainly dragged down by the poor financial reports of the technology sector. Dell and HP fell 12.25% and 11.36% respectively due to lower-than-expected performance, which significantly dragged down the overall market trend. In addition, the Russell 2000 index, which represents small and medium-sized stocks, rose and fell, indicating that small-cap stocks have a weak short-term rebound. From the overall trend, the Dow and S&P 500 indexes still maintain high-level fluctuations, but the short-term long-short divergence has significantly intensified, and the upward momentum has weakened. Small-cap stocks have shown a certain degree of resistance to declines, but whether they can further form an upward trend remains to be seen. In contrast, the Nasdaq index was dragged down by the weakness of technology stocks, and the downward pressure was relatively large, especially chip and AI concept stocks showed signs of short-term adjustments.

In such a market environment, the AI sector needs to patiently wait for the medium- and long-term opportunities brought by the future outbreak of the application layer, while the crypto market has shown more short-term vitality. After a sharp correction, BTC rebounded strongly on Wednesday and once broke through the \$97,000 mark. Technically, BTC's four-hour chart golden moving average system is in a sticky state, and the rebound process is accompanied by amplified volume, which indicates that the long and short directions of the crypto market are about to be determined. Therefore, in the short term, we should pay close attention to the dynamics of the crypto market and seize the opportunity of the next change.

Next, let's take a look at the investment portfolio of Smart Investment Strategy Plan No. 4: As shown in the chart, MU, which was recommended to be bought at around \$104 on Wednesday, may be in a small loss at present, mainly due to the fact that Dell and HP fell 12.25% and 11.36% respectively due to poor performance, dragging down the entire technology sector. From a technical perspective, MU's stock price fell below the key MA62 daily moving average, the short-term trend is weak, market sentiment is obviously under pressure, and the possibility of a short-term outbreak is reduced. However, from a medium- and long-term trend perspective, MU's overall upward channel remains intact, and the stock price has not fallen below the more critical support range, which provides a certain safety margin and waiting space for medium- and long-term holders.

For those who prefer short-term operations, since MU currently has limited short-term momentum, you can consider reducing or selling some of your positions and turning to stronger performance targets, such as the EVW token that has performed well recently. After breaking through the previous high, EVW showed strong upward momentum. As shown in the figure, its trend is very similar to that of MSTR after it broke through \$210. The technical side also shows the potential to further open up the upward space, which is especially suitable for short-term funds seeking opportunities for higher returns.

For medium and long-term investors, MU is still worth holding. Although the technology sector is under short-term pressure, the long-term logic of its industry fundamentals and market demand has not changed, and MU's future rebound potential still exists. It is recommended that community friends do a good job of position management and risk control arrangements according to their own risk preferences. Whether pursuing short-term returns or patiently waiting in the medium and long term, they need to flexibly adjust strategies in market changes and seize more certain opportunities.

As shown in the chart, EVW bought on Wednesday has now achieved a profit of about 20%, and its performance is much better than MU, showing strong upward momentum. In sharp contrast to MU's pullback, EVW continued to climb after breaking through the new high. From the technical trend, it shows a very strong bullish trend. From the chart, we can see that EVW's moving average system as a whole shows a clear upward trend, and the slope of the moving average continues to increase, which indicates that the upward momentum is steadily accumulating. At the same time, the MACD indicator shows that DIF and DEA have two consecutive golden crosses above the zero axis, further confirming the strong upward momentum in the short term. In addition, compared with BTC's previous sharp rise, EVW is still in the stage of compensating for the rise, and there is still significant profit space above, which has a large medium- and long-term investment value. For investors who already hold it, it is recommended to continue to hold it patiently and expand the profit space; and investors who have not yet established a position can take advantage of the current trend opportunity to buy in order to grasp the subsequent rise of this high-potential target.

What is more worthy of attention is the medium- and long-term growth potential of EVW tokens. As Vanguard AI 4.0 completes testing and gradually starts the commercialization process, this revolutionary system will significantly enhance the market application scenarios and liquidity of EVW tokens, becoming an important driving force for the rapid growth of its value. According to the current market trends and technical indicators, the future target price of EVW is expected to reach 6 to 8 US dollars. Are you ready for this major opportunity? This is still the best time to lay out EVW. Such an opportunity is fleeting. Please don't let it slip away from you quietly.

Crypto market:

Technical data shows that BTC rebounded strongly on Wednesday after a sharp correction, breaking through the \$97,000 mark at one point. As can be seen from the four-hour chart, the

EVW Business

School

golden moving average system is in a state of adhesion, and the DIF line and DEA line of MACD form a golden cross. The volume increases during the rebound and decreases during the correction, indicating that the market is accumulating momentum and the general direction of BTC will soon become clear. At present, the focus is still on BTC's key integer mark \$100,000. Before breaking through \$100,000, BTC's trend is expected to fluctuate within the range of \$90,000-100,000. At this stage, it is an efficient strategy to capture short-term profits by buying low and selling high and flexibly grasping the range band operation. Contract trading, with its advantages of long and short two-way operations, can provide traders with stable profit opportunities regardless of whether the market is rising or falling, as long as there is a clear trend space.

Once BTC successfully breaks through the integer mark of \$100,000, the market may usher in a historic unilateral bull market, and prices are expected to rise further. This not only means a strong continuation of the trend, but also will create unprecedented wealth growth opportunities for us. Therefore, at the current stage, seizing the contract trading opportunities within the shock range and being fully prepared for potential breakthroughs will become the key strategy to achieve short-term profits and long-term wealth appreciation. Whether it is spot or contract trading, if you need more accurate real-time trading signals or strategy support, please feel free to contact the assistant for professional guidance to ensure that every step of the operation is more based and guaranteed. That's all for today, and I look forward to Michael's sharing in the afternoon.

At last, today is our happy raffle day! Friends who have not yet redeemed the raffle code, please contact the assistant as soon as possible to avoid missing this exciting event. At the same time, I would like to emphasize that future points can not only be used to participate in the raffle, but can

EVW Business

School

also be directly exchanged for EVW tokens, bringing you more tangible value feedback. If you have any questions about the exchange method or operation details, please be sure to contact the assistant for detailed guidance.

That's all for today's sharing. Thank you again for your support and active participation along the way. In the afternoon, we look forward to Michael's wonderful sharing! I wish you all good luck, and look forward to more gains and surprises in the future!

Michael

Topics:

1. In the era of AI explosion, where is the next breakthrough?
2. Analysis of operation opportunities in the crypto market.

Yesterday, on this special Thanksgiving Day, I felt extremely happy and joyful to share my investment experience and growth experience with you! Thanksgiving Day is a day full of warmth and gratitude, and today, we ushered in the joyful lucky draw day full of expectations, and it is also the Thanksgiving feedback day we carefully prepared for community members! If you haven't redeemed the lucky draw code yet, please contact the assistant as soon as possible to complete the redemption, don't miss this opportunity to gain good luck! Our lucky draw event is not only a lucky competition, but also our sincere gratitude to every community member for their support and trust. I hope you can all gain more surprises and value through this lucky draw event!

At the same time, I would like to remind everyone that the uses of points will be more abundant in the future. Not only can it be used to participate in the raffle, but it can also be directly exchanged for EVW tokens to bring more value to everyone. This means that every bit of effort you have accumulated will be converted into actual income in the future, which will help increase your wealth! Regarding the specific exchange method and operation details, please contact the

EVW Business

School

assistant in time for details, and don't miss this new opportunity to accumulate wealth! We always uphold the original intention of gratitude, and hope to bring more growth and value to community members through continuous innovation and feedback. Thank you for the trust and support of every friend. Let us use wisdom, action and opportunity in this season of gratitude to welcome a more fruitful harvest and a brilliant future together!

Since I joined the business school, I have actively participated in every session of the Asset Multiplication Plan—Millionaire Training Camp. For me, this is not only an opportunity to learn, but also an extraordinary journey to challenge myself and surpass my limits. I still remember that in the last training camp, my total return rate through stocks and options reached an astonishing 700%! This is not only a leap in wealth, but also a perfect embodiment of the correct investment strategy and resolute execution. What I am looking forward to even more is that this time we will work with Vanguard AI 4.0 - a set of accurate and stable trading signal support system. Its addition will undoubtedly inject new power into our investment strategy, helping us to deal with market fluctuations in a more scientific, calm and efficient way and amplify the potential for income. The Asset Multiplication Plan—Millionaire Training Camp is not only an opportunity for wealth growth, but also an extraordinary journey to redefine investment thinking and tap into one's own potential. It can not only teach us how to optimize returns, but also shape our investment mentality and strategy, so that everyone can achieve a true transformation.

Therefore, I sincerely hope that every friend can seize this rare opportunity! As long as you participate in a Millionaire Training Camp, your investment ability, market vision and operational confidence will achieve a qualitative leap. Whether it is the improvement of skills, the doubling of income, or the maturity of mentality, this experience will become a meaningful part of your life. Each issue of the Asset Multiplication Plan—Millionaire Training Camp is a high-standard investment feast carefully created for each participant by professors who devote a lot of time and energy. This is not only an opportunity to learn and grow, but also an excellent opportunity to achieve a leap in wealth. Such opportunities are rare and their value is immeasurable!

At the same time, the options and contract trading tests that will begin next week will make final preparations for the full launch of The Asset Multiplication Plan—Millionaire Training Camp. These tests are not only an important part of strategy optimization, but also a key step in providing all participants with a more complete practical experience. I hope that every friend in the business school community can actively participate and contribute to the smooth launch of the Millionaire Training Camp. Your enthusiasm and actions will accelerate the official launch of The Asset Multiplication Plan—Millionaire Training Camp, so that this investment journey that changes your destiny can start soon!

Recently, I have seen many friends discussing the trend of Nvidia, the leader in AI chips. Since the financial report exceeded expectations, Nvidia's stock price once surged to \$152, but then continued to pull back, and the lowest has stepped back to the MA62 daily moving average, which is regarded as an important bull-bear dividing line. Many friends are worried about this. At present, although the stock price has begun to rebound, it still makes people doubtful. In fact, my views on Nvidia's trend are basically the same as those of the professor. I still remember that the

EVW Business

School

professor specifically mentioned last Friday that even if Nvidia will not experience a sharp correction in the short term, the upward space may be very limited. Therefore, the professor suggested that friends who hold Nvidia at the time could choose to reduce their positions or exit first and wait for better opportunities. Sure enough, starting this week, Nvidia's stock price has been falling as expected. Although there was a small rebound today, overall, the stock price has limited potential for growth in the short term. So will AI bring more investment opportunities? Let's take a look at the performance of artificial intelligence concept stocks in the past.

In the past decade, the U.S. stock market has produced many "ten-fold stocks", and technology stocks are the main force among them. In particular, Nvidia's leadership in the field of AI chips has enabled it to increase by 300 times in ten years. AMD has increased by 57 times, Broadcom has increased by 28 times, and other technology giants such as Tesla, Amazon, TSMC, and Netflix have also increased by more than 10 times. In addition, the market value of Apple and Microsoft has increased significantly. In this round of technology boom, artificial intelligence is undoubtedly the biggest theme. Stocks in the AI base layer, such as Nvidia, have experienced huge increases driven by the explosion of chip demand. Next, will AI bring more investment opportunities? When will the explosion of the AI application layer come? Based on this thinking, we can divide AI investment opportunities into four stages:

The first stage is the beneficiaries of AI basic hardware, such as Nvidia, which has benefited from the surge in demand for AI chips and its stock price has risen sharply in the past few years; The second stage is the construction of AI infrastructure, including cloud computing, big data and

EVW Business

School

other fields. Although the valuation of such stocks has increased, the future rise will rely more on profit growth rather than valuation expansion, and the continued investment of technology giants (such as Google, Microsoft and Amazon, etc.) will provide strong support for it.

The third stage is that AI application development has become the focus. Although the current valuation of related stocks is low, it will take some time for revenue to be realized, and the ability to realize it in the short term is still the key to market attention. However, "platform" companies such as Google, Microsoft, and Palantir have advantages. They can both use AI infrastructure and provide basic modules for the development of next-generation AI applications.

The fourth stage is to focus on the widespread application of AI technology and the improvement of productivity. At present, the application of generative AI in production is still in its early stages, and only a few companies are practicing it, but as the third stage of application matures, the widespread commercialization and promotion of AI will gradually become a reality. Investors need to pay attention to the development rhythm of this theme and grasp the comprehensive opportunities from infrastructure to widespread application.

The large-scale AI investment by technology giants is the main driving force behind the rise of AI infrastructure stocks. Companies such as Amazon, Google, Meta, Microsoft and Oracle continue to invest huge amounts of money in the development of AI-related technologies, driving the rapid expansion of the infrastructure sector. However, as valuations continue to rise, these stocks are also facing growth pressure. Future upside will rely more on the improvement of actual profitability rather than simple valuation expansion. Although AI infrastructure stocks still have the potential to rise, their subsequent gains will focus more on profitability rather than valuation increases driven by market sentiment.

To achieve a greater market breakthrough, the real outbreak and large-scale commercialization of the AI application layer are also needed. At present, although AI application stocks have relatively low valuations and stable performance, it is difficult to make a comprehensive layout in the short term due to the unclear development progress and monetization capabilities. Many application layer stocks with potential revenue growth have been limited in performance due to failure to meet market expectations. In the future, as AI applications gradually realize revenue, this field may usher in new investment opportunities. Be patient and wait for the opportunity for a big outbreak of AI applications.

Portfolio operation suggestions for Smart Investment Strategy Plan No. 4:

Based on the current market performance, I still maintain yesterday's view: Although MU fell below the MA62 daily average and the short-term trend weakened, the medium and long-term trend is still good. It is recommended to continue holding and wait patiently for a rebound.

At the same time, EVW's upward trend is continuing to strengthen, and BTC may break through the integer mark of \$100,000 at any time, and the overall money-making effect of the crypto market will be further amplified. In this context, increasing EVW holdings can better capture the structural opportunities in the crypto market and fully participate in this round of strong market conditions. Therefore, I suggest continuing to buy EVW to seize the strong trend of the crypto market, maximize short-term profit potential, and add greater growth space to the portfolio!

Crypto Market:

EVW Business

School

Globally, the acceptance of cryptocurrencies is rapidly increasing, and its influence is expanding from the investment field to the broader economic and government levels. From the city of Vancouver's plan to diversify its assets by holding BTC, to the Brazilian Congress' proposal to establish a national BTC reserve, to the public support of many officials in the new U.S. government for cryptocurrencies, these initiatives all show that BTC is gradually evolving from a simple investment tool to a strategically significant sovereign asset.

At the same time, the market's confidence in the future trend of BTC remains high. Although \$100,000 is an important psychological barrier that may trigger profit-taking by some investors, I believe this is only the starting point of the bull market. With the gradual opening of the global policy environment, the capital market's recognition of cryptocurrencies continues to increase. BTC has not only become a new choice for asset allocation, but is also moving towards a national strategic reserve and an important pillar of the global financial system. At this historic stage of change, the mainstreaming of cryptocurrencies provides unprecedented opportunities for investors and governments. Seizing this trend will not only enjoy technological innovation and policy dividends, but also have the opportunity to participate in the reshaping of the global financial system. The future of BTC may open a new chapter for global asset management and economic development!

Operation strategy:

Currently, BTC is fluctuating in the range of 90,000-100,000 US dollars, which is a typical high-level consolidation stage. At this stage, it is recommended to adopt the interval band operation strategy to capture short-term profits by buying low and selling high. In particular, through the long and short two-way operation of contract trading, it can respond to market fluctuations more flexibly and quickly lock in profits.

However, once BTC successfully breaks through the integer mark of 100,000 US dollars, the market may usher in a round of super unilateral rising market. In this market with a clear trend, profits can be maximized through a combination of spot, options and contracts. It is worth mentioning that the current holding yield of BTC spot has exceeded 40%. At this stage, maintaining patience and flexibility, paying close attention to breakthrough signals, and making layout plans in trend markets in advance are the key to maximizing profits!

Today's questions:

1. Among all the targets we have operated recently, do you know which targets have the largest increase of more than 30% during the period? (10 points)
2. How much profit does EVW token currently make? (10 points)
