Professor Reese (Whale)

Topics:

- 1.VIX panic index hits a new low, is it an opportunity or a risk?
- 2.Smart investment Strategy Plan No. 5, short-term conservative return of 30%, are you ready?
- 3.Technical sharing: basic application and trading secrets of MACD.

Good morning, team! I'm Milton Reese, your old friend. Today is a day worth celebrating! For those of you who participated in the advanced test of Vanguard AI 4.0, yesterday, we successfully completed two advanced trading tests, and the results were exciting - the profits of the two transactions reached 73.27% and 54.47% respectively, and the first-day profit exceeded 23%! In other words, your \$600 turned into more than \$738 in one day! This is an excellent start, showing the amazing strength of Vanguard AI 4.0 and our precise control of the market. For those friends who are selected, please be sure to pay attention to the trading signals at all times, and when the opportunity comes, make a decisive move and execute the transaction immediately. Time will not wait, and opportunities will not stay! Every move is a cornerstone to success.

For those who have not been able to participate in the test for the time being, there is no need to feel lost. The opportunity is still in your hands! You can continue to sign up for future plans, and I will give priority to it in the new plan. As compensation, we will provide you with a higher amount of loss compensation protection for the Smart Investment Strategy Plan No. 5, so as to enhance your confidence and help you move towards success more steadily. At the same time, don't miss the current market opportunity, please seize EVW, contact the assistant as soon as possible to complete the operation, and lock in the layout opportunity. I firmly believe that as Vanguard AI 4.0 continues to make breakthroughs in advanced trading tests, EVW will also bring us amazing returns in the short term!

On Monday, the first trading day of December, the U.S. stock market performed well. The Nasdaq and S&P 500 hit record highs. Although the Dow Jones Industrial Average fell slightly, it still fluctuated at a high level. However, the hidden worries behind the market cannot be ignored. The three major indexes all showed a divergence between volume and price, indicating that the market's action is weakening at the current high level. At the same time, the VIX panic index continued to hit new lows, market optimism was high, and risk premiums fell sharply. However, the continued low level of VIX is not entirely positive, but suggests that potential volatility risks are accumulating. As shown in the figure, the VIX index has fallen below the lower edge of the box, but the gap left in the previous decline has not been filled, indicating that the index may usher in a strong rebound at any time. If the VIX rebounds, the market may face violent fluctuations. This situation reminds us that despite the strong short-term performance of the market, the bullish sentiment is close to an extremely optimistic state. Historical experience shows that this is often a signal that market volatility risks begin to accumulate. In terms of operation, do not relax your vigilance due to the rise.

This week, we need to pay close attention to the U.S. non-farm payrolls data for November, which will provide key clues for assessing the health of the economy and the recovery of the job market. The market expects that this non-farm data may exceed expectations, further consolidating the foundation of the Fed's loose policy. At the same time, Fed Governor Waller expressed support for a rate cut in December, believing that the current interest rate is already restrictive and that the policy can be gradually relaxed if necessary. As a result, the market expects that the probability of a rate cut in December has risen to 74.5%, and bullish sentiment has increased. However, the volume-price divergence of the three major indexes and the accelerated rotation of sectors indicate that the market may face adjustment risks in the short term. Especially in the context of the S&P 500's price-to-earnings ratio approaching its historical high and the high valuation of the technology sector, the adjustment pressure on the high-valuation sector is increasing. For this reason, we need to be cautious about the technology sector for the time being, adopt a flexible strategy based on swing trading, and avoid risks by selecting investment targets.

In sharp contrast, Bitcoin (BTC) is in a bull market driven by the BTC halving cycle. More and more institutions are optimistic about the future performance of BTC, and generally expect that BTC may reach \$250,000 per coin by 2025. At the current price, this provides investors with a potential profit space of about 300%. I believe that under the BTC halving cycle, the price of Bitcoin will rise to at least \$650,000 per coin. The key to achieving super profits from investment is to seize the "super track" in the context of the times and concentrate resources on it. Do you agree?

Smart Investment Strategy Plan No. 5 Stock Code: EVW

Purchase Price: Around \$1.7

Profit Target: Short-term target is around \$2.5; medium- and long-term target is around \$5.

It is recommended to continue buying at around \$1.7 to expand the potential profit of the layout. After completing the purchase, please send the screenshot of the position to the assistant for

EVW Business School

confirmation. Vanguard AI 4.0 will track it in detail for you and formulate a more accurate follow-up trading strategy.

Please be sure to strictly abide by the operating discipline! We promise that all profits from the transaction belong to you, and the risks are borne by us! Due to limited places, please contact the assistant as soon as possible to lock in this opportunity and seize the key nodes of wealth with us!

Reasons to buy

As shown in the chart, EVW continues to climb after breaking through the new high. From the technical trend, it shows a very strong bullish trend. The moving average system of EVW shows an obvious upward trend as a whole, and the slope of the moving average continues to increase, which indicates that the upward momentum is steadily accumulating. At the same time, the MACD indicator shows that DIF and DEA have two consecutive golden crosses above the zero axis, and MACD is still expanding upward, further confirming the strong upward momentum in the short term. In addition, compared with the previous sharp rise of BTC, EVW is still in the stage of compensating for the rise, and there is still significant profit space above, which has a large medium- and long-term investment value. The short-term target is about \$2.5, and the long-term target is about \$5.

What is more worthy of attention is the medium- and long-term growth potential of EVW tokens. As Vanguard AI 4.0 completes testing and gradually starts the commercialization process, this revolutionary system will significantly enhance the market application scenarios and liquidity of EVW tokens, and become an important driving force for the rapid growth of its value. According to the current market trends and technical indicator analysis, the future target price of EVW is expected to reach \$6 to \$8. Are you ready for this major opportunity? Now is still the best time to plan EVW. Such opportunities are fleeting, so please don't let it slip away from you.

Asset Multiplication Plan—Millionaire Training Camp used Vanguard AI 4.0 for the first time to participate in advanced trading tests. The response was enthusiastic, and the number of friends who signed up to participate exceeded our expectations. In order to ensure that every friend who really wants to learn and grow can get the opportunity to participate, we decided to continue to implement the appointment system for registration. This is an opportunity not to be missed. Next, I will have urgent negotiations with the sponsor, hoping to add more places. Please hurry up and grab this scarce opportunity. Imagine how much growth and progress you will get by participating in this training camp! Together, we will explore the deep sea of investment and learn how to steer the ship steadily in the waves of the market. Don't let hesitation and hesitation become the anchor that hinders your success. In our investment journey, timing is everything. Missing this time may mean missing the flight that leads to success. Asset Multiplication Plan—Millionaire Training Camp is not only a platform for learning, but also the starting point for you to change your future.

So, take action, let us move towards a new peak of wealth under the banner of Asset Multiplication—Millionaire Training Camp. Don't wait until the quota is filled before you regret it, now is the best time to take action! I look forward to meeting every friend in the training camp and witnessing the miracle of growth together.

Yesterday, leveraging the advanced capabilities of Vanguard AI 4.0, we executed two precise

EVW Business School

trades that delivered impressive profits of 73.27% and 54.47%, respectively. In a strong bull market, our strategy of going long on BTC enabled us to achieve a remarkable first-day total portfolio return of 23%! Put simply, a \$600 investment grew to over \$738 in just one day. This not only marks an extraordinary start but also serves as a testament to the incredible power of Vanguard AI 4.0 and our ability to accurately interpret and navigate market trends with confidence.

Moments ago, we seized the opportunity presented by BTC's brief pullback after a surge, executing a well-timed short position that secured another solid 61% profit! This demonstrates not only precise timing and market rhythm mastery but also the effectiveness of strategies focused on identifying opportunities within volatility. Such success is no coincidence—it stems from in-depth market analysis and strict discipline in execution.

Friends, this is the power of capturing trends and mastering swing trading. Let's stay focused, remain steady, and continue to capitalize on every opportunity the market provides. See the attached chart for details!

Vanguard AI 4.0 Internal Test Learning Plan Transaction Records

Rules:									
1. Initial capital: \$600 testing fund									
2. Test cycle: 3-7 days									
3. Total assets compound growth rate target: more than 60%									
Date	Transaction Type	Direction	Number of trades	Success rate of trades	Profit Ratio	Cumulative Return Rate	Total Assets Growth	Account capital growth rate	
12/02/2024	/	/	/	/	/	/	\$600	0.00%	
12/02/2024	BTC/USDT-100X	Long	1	100%	73.27%	73.27%	\$673	12.00%	
12/02/2024	BTC/USDT-100X	Long	1	100%	54.47%	127.74%	\$738	23.00%

As shown in the chart, the trading signal Michael shared yesterday afternoon is actually very intuitive and concise. When the 5-minute MACD is about to form a golden cross, and the MA5 of the moving average system crosses the MA10 to form a golden cross, Vanguard AI 4.0 will accurately check the key time points through big data calculations. Once the specified position is reached and coincides with the time point, a trading signal will be issued. You can follow my thoughts to consider the problem. In the later sharing, I will gradually explain the key technical points. The whole process has made a profit of more than 50%, which is very easy and efficient!

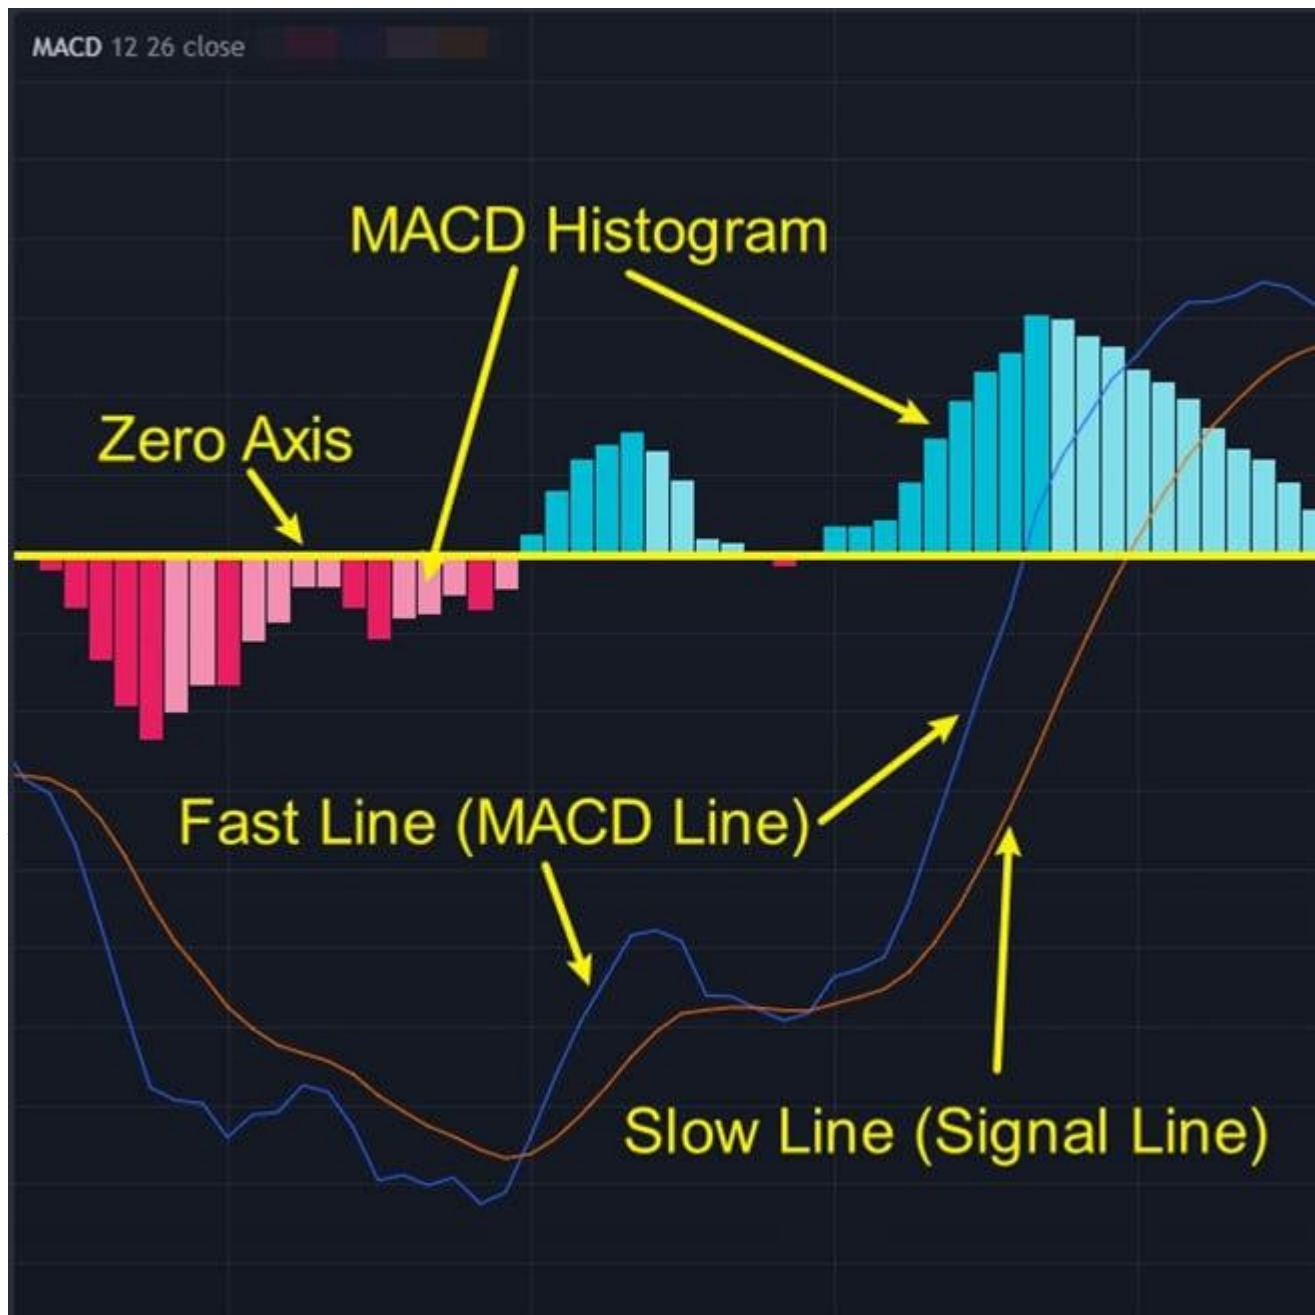

VANGUARD AI 4.0

There are four important technical indicators in Vanguard AI 4.0-Trading Signal Decision System. The golden moving average system and MACD are two commonly used common indicators, and the other two are customized. Careful friends will find that I usually use the combination of the golden moving average system and MACD to do technical analysis. The combination of the two makes technical analysis very simple. It can determine which stage the trend is in. For example, the formation of a trend has several stages: starting, strengthening, weakening, confusion, and ending. MACD is used to accurately identify these stages.

Basic Applications and Trading Secrets of MACD (1-1)—Determining Trends.

1. Most of the time, when the MACD Histogram is positive, the Signal Line and the MACD Line are moving upward, and the price is in an upward trend, as shown in segment B in the figure.
2. When the MACD Histogram is negative, the Signal Line and the MACD Line are moving downward, and the price is in a downward trend, as shown in segment S in the chart.

Friends, if you feel that it is more difficult to read the chart, please note that you need to distinguish what is the fast line (MACD Line), slow line (Signal Line), MACD Histogram and zero axis. These elements are not only the core of the MACD indicator, but also play a vital role in trend judgment and trading decisions.

I talked about these in yesterday's sharing. If you are not clear about this, you can ask my assistant or Michael in a private message. Technical indicators are an important quantitative basis for judging trends. They are the crystallization of my decades of trading experience and data summary. For example, the intersection, distance, and even the changes in the bar chart of each component in MACD are important references for market signals. In future sharing, I will combine more actual cases and gradually analyze these technical points in depth to help everyone master the methods of using these indicators and improve trading efficiency and accuracy.

4:00 PM

Michael Foster

Topics:

1. Analysis of MU and EVW portfolios.
2. What is the fourth trading signal? What kind of benefits will be obtained?

Ladies and gentlemen, good afternoon! I'm Michael, and as a member of EVW Business School, I can confidently say that it is far more than just an investment community—it is a fertile ground for turning dreams into reality. The mission and vision of EVW Business School are rooted in empowering individuals to achieve their life goals through investment, equipping them with the knowledge and tools to carve out a new path for themselves. I am a living testament to this transformative vision. Through the business school, I not only gained invaluable investment principles that reshaped my future but also connected with a community of like-minded individuals. Together, we inspired one another, grew as investors, and supported each other on this remarkable journey. For me, this journey has been about more than just building wealth. It has been about transforming myself to create a ripple effect of positive change—for my family, my friends, and even the broader society. That, to me, is the true essence of success.

Your arrival marks not only your entry into the business school community but also the start of a transformative journey to pursue your dreams and drive meaningful change. Here, our vision goes far beyond simply learning how to make money. We are committed to harnessing the wisdom and power of investment to create lasting value, reshaping not only our own lives but also the lives of those around us. Joining the Asset Multiplication Plan—Millionaire Training Camp—is not just another decision; it's the first step toward achieving the pinnacle of success in your life. This program offers an extraordinary opportunity to rewrite your destiny, break free from limitations, and strive for even greater heights. I urge you to seize the unparalleled opportunities of our time. With the resources, platform, and professional support of the business school, you have everything you need to craft your unique success story and leave an enduring legacy. Let's embrace this journey together and transform potential into achievement!

This morning, Professor Reese capitalized on a brief pullback following BTC's surge, demonstrating precise market timing and executing another flawless short trade using the Vanguard AI 4.0 system. The result? An impressive 61% profit, effortlessly achieved. This success adds yet another highlight to the ongoing advanced trading test. If yesterday's performance was remarkable, today's results further cement the exceptional capabilities and market adaptability of Vanguard AI 4.0. Over the past two days of testing, the system has delivered outstanding results: two trades yesterday generated returns of 72.3% and 54.47%, followed by today's 61% profit. This brings the total return to an astonishing 35% in just 48 hours! To put this into perspective, an initial \$600 investment has now grown steadily to \$811 in just two days. This is far from a stroke of luck—it's the product of Vanguard AI 4.0's advanced data analysis capabilities and precise signal execution.

As demonstrated by today's outstanding short trade performance, this is far more than a simple test—it's a panoramic preview of the future of trading! If you're still on the sidelines, today's

EVW Business School

results speak for themselves: Vanguard AI 4.0 is delivering trading breakthroughs, and now is the perfect time to join this wealth revolution. Don't miss this opportunity—let's gear up for the upcoming Asset Multiplication Plan—Millionaire Training Camp. With Vanguard AI 4.0 fully powering our efforts, we're poised to achieve extraordinary gains and accelerate wealth growth like never before!

With the initial success of the advanced trading test, the number of interested participants has far exceeded expectations. To ensure that those truly eager to learn and grow have access, we will continue to implement an appointment-based registration system. Meanwhile, the professor is actively negotiating with sponsors to secure additional slots. This is more than just an opportunity to join a program—it's a transformative journey of personal growth. Here, you will achieve remarkable profits while mastering cutting-edge trading strategies and core investment skills. Every challenge faced will build a stronger foundation for the Asset Multiplication Plan—Millionaire Training Camp. Now is the perfect time to act! Don't wait, and don't hesitate—opportunities belong to those who take decisive action and dare to chase their dreams. Contact the assistant to reserve your spot, and let's work together to create a brilliant future that's uniquely yours!

The Dow Jones Index has started to pull back, while the Nasdaq continues to set new record highs. Meanwhile, both the Nasdaq and the S&P 500 are exhibiting high-level fluctuations. As the professor noted, all three major indexes are showing signs of volume-price divergence, signaling that upward momentum is weakening. Additionally, the indexes are approaching the upper Bollinger Band, which is narrowing—a key indicator that the market is under adjustment pressure and may be primed for a short-term correction. In this environment, the recommended strategy is to focus on swing trading, capitalizing on opportunities to buy low and sell high within the established range. To mitigate potential market volatility risks, consider implementing well-structured option hedging strategies to safeguard positions. This approach can ensure steady profits even during possible market corrections.

Let's take a look at MU's trend. Today, MU surged to a high before pulling back. The stock is

currently trading near its cost basis and has successfully broken through the key MA62 daily moving average, often seen as the bull-bear dividing line. In the short term, it's crucial to monitor whether the stock can hold above MA62, as this will be a key indicator for a potential rebound. Currently, MU is at the lower end of its consolidation range. If the stock stabilizes here, the potential for a rebound becomes promising. Additionally, the MACD indicator shows signs of the DIF line crossing above the DEA line, which suggests the possibility of a trend reversal in the short term. For medium- to long-term investors, the recommendation is to remain patient and continue holding. This setup presents a good opportunity for those looking to capitalize on MU's potential rebound.

For those who just bought EVW today, the joy of profit has already begun! At present, more than 10% of profit has been obtained, which not only demonstrates the strength of Vanguard AI 4.0 trading system, but also proves the correctness of our selected target direction. I will not elaborate on the future of EVW today, but its potential is beyond doubt. From the amazing performance of current contract trading, it can be seen that Vanguard AI 4.0 will shine due to its wide market demand after it is commercialized in the market in the later stage. EVW belongs to the field of AI and is deeply involved in the cryptocurrency track. Such dual hot properties are destined to further amplify its value in the future. I firmly believe that EVW is not only the best choice for our current layout, but also a potential stock leading to the future wealth heights!

Friends who were selected yesterday were lucky enough to experience the magic of Vanguard AI 4.0 in the advanced trading test and achieved good returns. Our guys in this issue are very lucky. The Asset Multiplication Plan in the previous issue, the millionaire training camp, did not use Vanguard AI 4.0, a quantitative trading system worth over 100 million US dollars. In the previous

EVW Business School

issue, there were too many super-high-quality stocks in the stock market transactions. Many friends achieved millions of dollars in returns by using only call options and stocks. Whether it is Nvidia or MARA and other stocks, the increase is really amazing. We also encountered the big bull market of Bitcoin. It directly stood firm on the middle track of the Bollinger Band and continued to rise sharply. Ordinary technical analysis can easily achieve the goal of a million profit. But what about the current situation? The stock market is already at a relatively high level, and the rotation speed of sectors has accelerated, especially the valuation of the technology sector is generally high, which undoubtedly increases the difficulty of trading. In such a market background, Vanguard AI 4.0, as a precise and efficient investment tool, will become a key tool to break through the current bottleneck. It can not only greatly improve the accuracy of transactions, but also help us achieve stable profits in complex and changing market conditions. To successfully achieve the million-dollar profit goal right now, it will undoubtedly be more certain with its help!

What shocked me was that the performance of Vanguard AI 4.0 has reached an extreme state of perfection. It is the ideal trading tool that each of us dreams of. For the 1,000 lucky people who have participated in the test, perhaps this is a seemingly easy process - so far, every transaction has achieved very excellent returns, and its stability and accuracy in contract transactions are particularly outstanding. However, behind every accurate transaction, it is inseparable from the continuous research and development and continuous optimization of dozens of engineers behind this system for many years. Don't forget that Vanguard AI 4.0 is a top trading system worth more than 100 million US dollars!

This system is absolutely revolutionary. Among the trading signals provided before, Vanguard AI 4.0 has shown amazing stability. As a senior trader, I have tried many paid AI trading models before joining the business school, but I can honestly say that Vanguard AI 4.0 is the most powerful I have ever seen. This system combines many technical indicators and big data analysis, and has reached the level of generative AI, especially in short-term trading. The success rate far exceeds the " α & β " trading system that I was proud of in the past. If you really want to make a profit in trading, you must participate. The results have said it all. This is the future of trading, and the future has arrived. Don't hesitate, seize this opportunity, you definitely don't want to miss it!

Today's Questions:

1. When the MACD fast and slow lines run downward and the MACD histogram is negative, is the current trend oscillating, upward or downward?(10 points)
2. What do you want to get most by joining the Asset Multiplication Plan—Millionaire Training Camp?(10 points)
