9:30 AM

Michael Foster

1. The market is already overheated, and Goldman Sachs predicts that the U.S. stock market may experience a correction of more than 30% in the future.
2. Trump signed an executive order, will the United States become the global crypto capital?

Ladies and gentlemen, good morning! I am Michael! I am very happy to start a new day with you on this promising morning. Yesterday, the professor and I discussed in depth the core advantages and unique value of the Strategic Partner Program. At the same time, President Trump is fulfilling his promise to make the United States the center of global crypto. Friends, are you ready to join a higher-level partner group and follow us to seize this unprecedented wealth opportunity?

In investment and strategic layout, we always adhere to a simple but key principle: just like fishing, the first rule of success is to choose a place with many big fish. The second rule is to always keep the first rule in mind. This is exactly the same as the logic of investment - to concentrate resources on the areas with the greatest potential and the most worthy of investment.

More importantly, I have always remembered what the professor said to me back then: "If the direction is right and the logic is correct, then why not invest more? Why not concentrate your superior resources and go all out?" This is an investment philosophy that has always benefited me.

Buffett once said: "Opportunities are limited, but mistakes are endless. Smart investors do not invest in more targets, but invest in fewer but better targets, and concentrate resources on real opportunities." This sentence is the essence of investment.

Today, the crypto market we are in is just such a big pond with many fish, and the Strategic Partner Program is a key tool to help us firmly grasp this historic opportunity. Now is the best time to act. Let us open our glorious chapter together with decisive decision-making and firm execution!

The three major indexes continued to rebound yesterday. Is it a rebound or a reversal? Let's see what Goldman Sachs says? They believe that the current market is overheated and there may be a correction of up to 30% in the future. Like all investment institutions, Goldman Sachs' team of analysts is committed to analyzing stock market data to try to predict recessions that could cause significant losses to Goldman Sachs and its clients' holdings. Although the overheated market itself poses the risk of a sharp correction, Goldman Sachs also sees another potential threat: uncertainty about the economic policies of the incoming Trump administration. Goldman Sachs data shows that the risk level has risen sharply since September 2024. The key risk indicators they track include:

Overall economic growth in the United States;

Inflation (inflation may rise again, which will hinder the Fed's interest rate cuts);

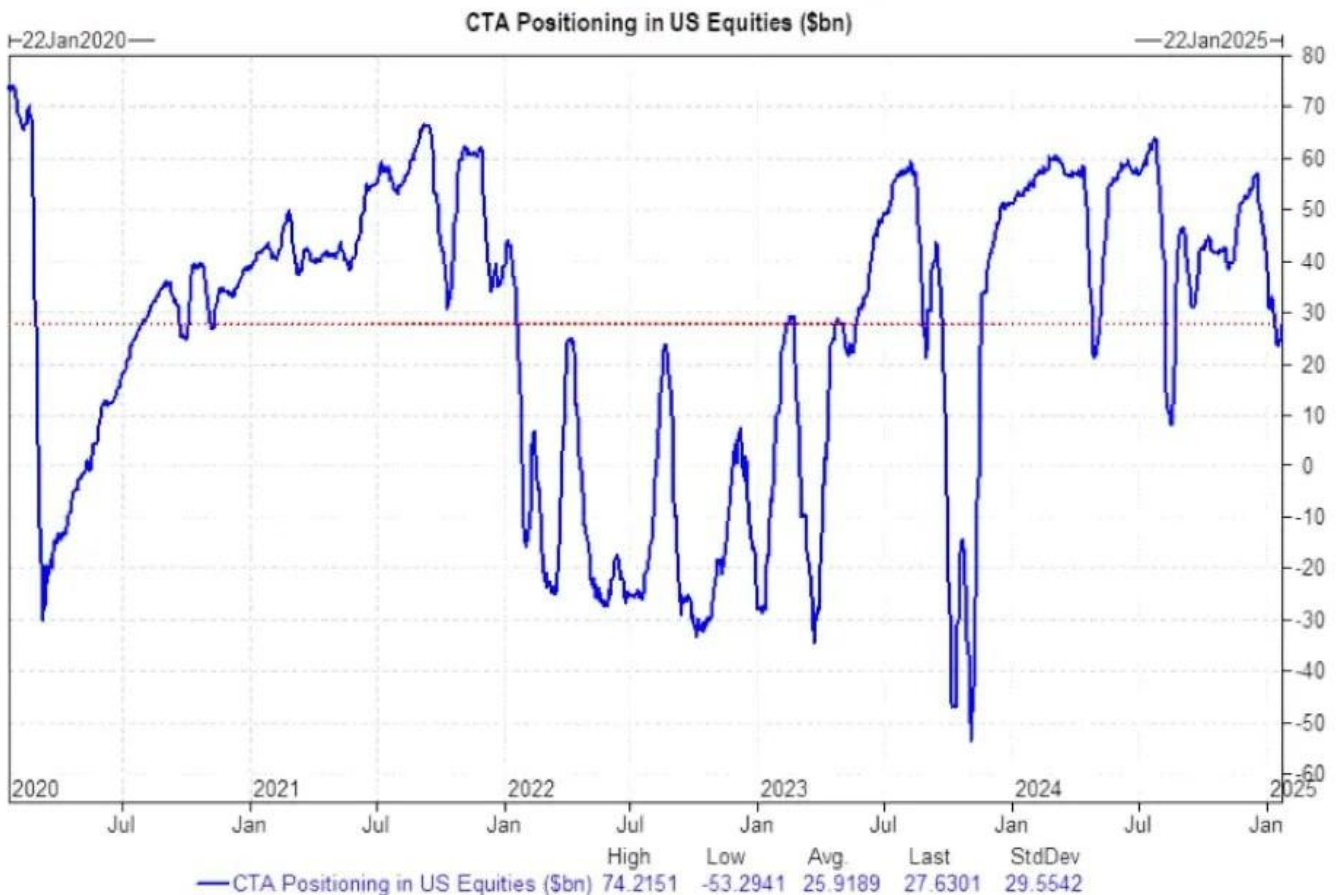

EVW Business School

The direction of U.S. economic policies;
The rise in stock valuations (stock prices) across the market.

Goldman Sachs' team of analysts pointed out: "Market variables have contributed most significantly to the upward momentum of inflation. In the past few months, commodity prices and the U.S. break-even inflation rate have continued to rise." Goldman Sachs' report also emphasized that the Trump administration's tariff policy will become the "center" of increasing global trade uncertainty and have a profound impact on the market. In addition, uncertainty in European economic policies also increases the risk of major adjustments in the market. Like the Federal Reserve, the European Central Bank is also trying to curb inflation by managing interest rates in 2024. Goldman Sachs said that uncertainty in the European region is at an "all-time high" and has led to a decline in European stock valuations.

Goldman Sachs has been tracking the risk of a global stock market decline since 1950. Currently, the risk factor is close to 30%, enough to sound internal alarm bells. In the history of Goldman Sachs starting to track the risk of a decline, the largest pullbacks and adjustments have occurred when the risk factor exceeded 35%. Although the current risk rating has not yet reached this level, it is gradually approaching the danger zone. For example, if Trump's tariff policy causes the final price of consumer goods to be beyond the affordability of consumers, then the listed companies that produce and sell these goods may face huge profit losses, which will in turn bring huge downward pressure on the stock market. The risks faced by the technology industry in this situation are particularly prominent.

According to data from Goldman Sachs' trading department, the long positions of commodity trading advisors (CTAs) have returned to the level after the market crash in August last year. As a typical representative of trend-following strategies, CTAs can be regarded as a weather vane for major funds. Data from Deutsche Bank shows that the combined holdings of rule-based and active fund investors have fallen to a two-month low, which further indicates that large funds in the market have not yet fully entered the market. Although the S&P 500 has hit a new record high, institutional investors have reduced their long positions. This shows that institutional funds are not optimistic about the current stock market and risks are accumulating.

Judging from the recent market performance, although the three major indexes rebounded this week, the volume was obviously insufficient. The Dow Jones and Nasdaq rebounded without the support of volume, and faced the pressure of previous highs; while the S&P 500, despite hitting a record high, showed a trend of gradual shrinkage in volume. This divergence between the index and volume is usually regarded as a signal of insufficient rebound strength. If the market does not have more substantial positive news to stimulate, the three major indexes may face a larger correction at any time. In other words, the current stock market situation can be summarized as "rising is risky, falling is an opportunity."

It is based on this market judgment that we decisively recommend everyone to sell stocks and switch to the crypto market when the U.S. stock market pulls back. This not only avoids the potential pullback risk of the traditional stock market, but also transfers funds to areas with higher growth potential. Even if the U.S. stock market has rebounded, compared with the amazing profits brought by the crypto market recently, such a rebound can only be described as "insignificant". Therefore, the goal of earning millions or even tens of millions of profits through the stock market is almost unrealistic in the current market environment.

UNITED STATES LEADERSHIP IN DIGITAL FINANCIAL TECHNOLOGY

January 23, 2025

ENSURING U.S. LEADERSHIP IN DIGITAL FINANCIAL TECHNOLOGY: Today, President Donald J. Trump signed an Executive Order to establish regulatory clarity for digital financial technology and secure America's position as the world's leader in the digital asset economy, driving innovation and economic opportunity for all Americans.

- The Executive Order establishes the Presidential Working Group on Digital Asset Markets to strengthen U.S. leadership in digital finance.
 - The Working Group will be tasked with developing a Federal regulatory framework governing digital assets, including stablecoins, and evaluating the creation of a strategic national digital assets stockpile.
 - The Working Group will be chaired by the White House AI & Crypto Czar and include the Secretary of the Treasury, the Chairman of the Securities and Exchange Commission, and the heads of other relevant departments and agencies.
- The White House AI & Crypto Czar will engage leading experts in digital assets and digital markets to ensure that the actions of the Working Group are informed by expertise beyond the Federal Government.
- The Executive Order directs departments and agencies with identifying and making recommendations to the Working Group on any regulations and other agency actions affecting the digital assets sector that should be rescinded or modified.
- The Executive Order prohibits agencies from undertaking any action to establish, issue, or promote central bank digital currencies (CBDCs).
- The Executive Order revokes the previous Administration's Digital Assets Executive Order and the Treasury Department's Framework for International Engagement on Digital Assets which suppressed innovation and undermined U.S. economic liberty and global leadership in digital finance.

ELIMINATING REGULATORY OVERREACH ON DIGITAL ASSETS AND

PROTECTING AMERICAN ECONOMIC LIBERTY: President Trump is fulfilling his promise to make the United States the "crypto capital of the planet."

- President Trump will help make the United States the center of digital financial technology innovation by halting aggressive enforcement actions and regulatory overreach that have stifled crypto innovation under previous administrations.
- President Trump's policy vision marks an unprecedented step towards welcoming in a new era for digital financial technology; one in which President Trump's administration will work towards ensuring innovation thrives, regulatory frameworks are clear, and economic liberty is protected.
- The growth of digital financial technology in America must remain unhindered by restrictive regulations or unnecessary government interference.

In stark contrast is the crypto market. Yesterday, the new U.S. President Donald Trump signed an executive order to establish a dedicated crypto task force to propose new digital asset regulations while exploring the possibility of establishing a national crypto reserve. This move fulfills Trump's promise during the campaign to quickly reform U.S. crypto policy and is also considered an important step forward for the industry. In this regard, Smith said in a statement: "Through this executive order and the candidates proposed by President Trump, he is fulfilling his promise to promote the United States as the global crypto capital."

Moreover, yesterday Trump delivered a speech in Davos, Switzerland via video. The following are the main contents of the speech:

1. Congress will pass the largest tax cut bill in U.S. history
2. Request Saudi Arabia and OPEC to lower oil prices
3. Call for promoting peace between Russia and Ukraine
4. Urge the Federal Reserve to lower interest rates immediately and hope that the world will follow
5. The United States will become the world capital of AI and crypto

From these heavy news, we can almost draw a clear direction: crypto will become the absolute core of future economic development! Trump's speech sent us a clear signal: the U.S. Bitcoin strategic reserve plan has been basically confirmed, which will inject unprecedented strong momentum into the crypto market. Judging from the current market structure, Bitcoin will exceed \$180,000 in the first quarter of this year. The current wave of favorable crypto policies is just the beginning! As a series of new policies of the Trump administration are gradually implemented, Bitcoin will usher in a more rapid development. In the first quarter, Bitcoin will reach a peak of \$180,000, which will be the moment for us to witness historic changes!

The opportunity of $1+1 > 2$ is right in front of us!

Next, let's take a closer look at the current opportunities. As I mentioned before, the token market value management plan and the profit sprint of the Strategic Partner Program will jointly create an unmissable $1+1 > 2$ wealth opportunity. Next week is the last week of January. In order to successfully complete the goals we set before, we will lead all partners to sprint to the million-dollar profit goal.

Now, the crypto market has given us a chance to change our destiny. Since you have chosen to enter the investment market, you must make a name for yourself in the crypto contract. Especially in the Strategic Partner Program, everyone should move towards a higher group with a higher goal! In the investment market, it is never wrong to pursue maximum benefits. As the famous saying goes: "Without a dream, why go far away."

The upcoming crypto market is very important to everyone, and we are about to usher in a profit opportunity that is more influential than the non-farm payrolls - the Federal Reserve interest rate decision. This heavyweight event will trigger major fluctuations in the crypto market, providing an unprecedented golden opportunity for our contract trading. This is not only an important node in the crypto market, but also a key battle for us to lead all partners to sprint to the million-dollar profit target.

Opportunities are fleeting, so all partners are requested to take action immediately, prepare funds in advance, and welcome this extraordinary trading feast with the best condition and 100% execution!

It is important to note that the crypto contract market will not always maintain such a strong profit effect. As time goes by, market laws will dictate that any efficient market will experience an adjustment period. At present, it is the best profit window in the market, and it is a critical moment for ordinary people to change their fate and quickly achieve wealth. If you wait until everyone has made money before you realize it, the market may have already begun to weaken.

Therefore, the task now is simple: go all out and seize every minute and every second! Opportunities never stay, they belong to those who are well prepared and dare to sprint. The market of encrypted contracts is your chance to change your fate, and it is the only one.

Invest with one hand and prepare with two hands! While making huge profits in the crypto contract market, don't forget that we have another important opportunity coming - Vanguard AI 4.0 system is about to go global! At this time point, we must not only grasp the current market, but also plan ahead for another major opportunity, that is, the regional agent plan. Friends, are you ready?

Now, I have seen that some students have reserved the right to use the Vanguard AI 4.0 system in advance, which is great! This not only shows your excellent investment vision, but also shows that you are beginning to understand how to seize the market's explosive point. At the same time, this is also the greatest support for the professor. What the professor needs is not money, but recognition of the Vanguard AI 4.0 system. This recognition is the greatest affirmation and encouragement for his years of hard work.

Not only business school students, but also many international investors have already reserved the right to use the Vanguard AI 4.0 system in advance. This fully proves that the efforts of the professor and the team have not been in vain, and the value of this system has been recognized worldwide.

In the future, the launch of the Vanguard AI 4.0 system will lead to a disruptive investment revolution. At present, the professor has not fully released the quota for regional agents, and this excellent opportunity will be given priority to outstanding students of our business school. This is a right that only business school students can have, and of course a responsibility, an opportunity to grow together with the Vanguard AI 4.0 system, and witness glory and victory together in the future.

Our Regional Agent Program is not just an ordinary investment, but a choice that can be considered a lifelong career. Imagine: maybe you no longer need to work for your boss, no longer have to compromise yourself in a busy workplace; maybe you no longer need to worry about whether your pension after retirement is sufficient. Through the Regional Agent Program, you can use your own efforts and foresight to create a future that truly belongs to you.

Exclusive rights of regional agents:

1. Exclusive agency rights: Become the only designated agent in the region and enjoy exclusive business rights without worrying about competition. Enjoy generous share of all business income in the agency area.
- 2 Continuous income: Regional agents not only get a one-time sales share, but also continue to earn income through the trading activities of long-term users, realizing the continuous growth of wealth.
3. Brand support: The business school provides all-round brand support, including publicity resources, marketing plans and Vanguard AI 4.0 system technical support to ensure that agents can easily conduct business.
4. Regional resource priority: Have the right to give priority to partners, expand new business channels, and even set up regional branches.
5. Special dividend plan: Some regional agents also have the opportunity to participate in the global dividend plan and enjoy annual dividends based on the overall performance of the business school.

Today, I want to emphasize a key point again:

Next, as the Vanguard AI 4.0 system continues to mature and its precise integration with real-time trading conditions, our profit margins will only grow.

So, now is the time to put away your suspicion, timidity, and cowardice! Take out your courage, stand up, and be your own hero! Take out your funds and fight for a real chance to turn things around for yourself. This is not just an investment, but also a trust in yourself and an attempt to turn your life around.

Today's sharing ends here. I hope that every friend can take the initiative to think, reflect, and find their own direction after reading the sharing.

If you have any questions, you can always keep in touch with me or the professor. Of course, if it involves details, you can also contact the assistant directly. We are always here to provide answers to every question you have and escort every decision you make. The opportunity is right in front of you, I hope you will seize it bravely!

Jan. 24, 2025, EST

4:00 PM

Professor Reese (Whale)

Topics:

1. Strategic Partner Program in progress.
2. Three major profit opportunities , striving to achieve the goal of million-dollar profit

Good afternoon, team! I'm Milton Reese, your old friend. Time flies, and it's Friday. Looking back on the past journey, from the initial weekly stock trading signals, to the later dual trading signals of stocks and futures, and now to the daily accurate grasp of crypto futures signals, have you found an obvious trend? Our profit efficiency is constantly improving!

As the money-making effect of the U.S. stock market gradually declines and the bull market cycle of the crypto market starts strongly, our investment strategy always keeps dynamic adjustment and seamlessly connects with the market rhythm. We decisively switched from the traditional stock market to the crypto market, from low-frequency trading to high-frequency precise layout. This not only reflects our flexible adaptation to market changes, but also reflects our unremitting efforts to achieve wealth goals.

All of this success stems from our accurate prediction of the market pulse and our deep insight into future trends. It is this foresight and execution that has kept us ahead in this fierce market competition and created brilliant achievements for our team members.

Friends, please remember that opportunities belong to those who follow the trend and act decisively. Stay focused and keep taking action. Let us seize every opportunity for wealth in this wave of crypto bull market and move towards a higher peak together!

Vanguard AI 4.0 Strategic Partnership Investment

Strategic Partnership Group Name	PP VIP1		IP VIP2		SP VIP3		SSP VIP4

Congratulations to all partners! So far, we have achieved remarkable success in the crypto market! Through precise strategies, decisive execution, and the full support of the Vanguard AI 4.0 system, the total asset returns of each strategic partner level have soared across the board, creating unprecedented results for the partner group:

VIP1: 1.7 times the return on total assets

VIP2: 2.6 times the return on total assets

VIP3: 3.3 times the return on total assets

VIP4: The return on total assets has reached an astonishing 8.2 times!

Such results not only reaffirm the excellent effect of our Strategic Partner Program, but also prove our accurate judgment of the bull market cycle of the crypto market. In particular, the high-level group has achieved exponential growth in returns through the power of compound interest and larger-scale capital operations, fully demonstrating the value of execution and action.

Friends, this is the charm of the crypto market! In this market where opportunities and challenges coexist, the correctness of the direction determines everything, and execution amplifies the return of every opportunity. VIP4's performance is the best example: it not only occupies the commanding heights of the crypto market, but also allows participants to enjoy the pleasure of wealth fission.

This week is undoubtedly a milestone week for the crypto market! Not only because the United States ushered in Donald Trump, the first "crypto president", but also because on his first day in office, he quickly took a series of remarkable actions to comprehensively promote policy reforms for crypto.

First, Trump decisively fired former SEC Chairman Gary Gensler and appointed Mark Uyeda, a long-time crypto supporter, as the new SEC Chairman. This move marks a radical shift in the regulatory environment of the U.S. crypto market, and also indicates that future policies will be more open, innovative, and friendly. Even more exciting is that Trump signed a historic executive order yesterday to establish a dedicated crypto task force to propose new digital asset regulations and explore the possibility of establishing a national crypto reserve. This not only fulfills Trump's reform promises made during the campaign, but also demonstrates his ambition to lead the United States to a dominant position in the global crypto market competition.

The market generally believes that this series of measures by the Trump administration is quickly fulfilling its promise to build the United States into the "global crypto capital." The continued implementation of supporting policies will greatly enhance the United States' position in the global crypto market, while also bringing investors clearer policy expectations and huge market confidence.

Meanwhile, Larry Fink, CEO of BlackRock, discussed the future of digital currencies in an interview at the World Economic Forum in Davos. He said that the price of Bitcoin could climb to \$700,000 per coin due to concerns about currency debasement. Fink said: "A small allocation of 2% to 5% by asset managers collectively could drive the price of Bitcoin higher. If you are worried about currency debasement, or if you are worried about the economic or political stability of a country, you can have an internationally based tool - Bitcoin, which can overcome these localized fears." However, he said he was not promoting Bitcoin. Fink also said that he was concerned that inflation could rise in the next 12 months and warned that it was dangerous to assume that peak inflation had been reached.

Dear friends, the crypto market is entering a new golden age. Trump's recent series of measures have sent a clear signal to the world: the U.S. Bitcoin strategic reserve plan has been basically confirmed. This historic decision will undoubtedly inject unprecedented strong momentum into the crypto market.

Judging from the current market situation, Bitcoin will exceed \$180,000 in the first quarter of this year. The current favorable policy wave for cryptocurrencies is just the beginning! As a series of

new policies of the Trump administration are gradually implemented, Bitcoin will usher in a more rapid development. When Bitcoin reaches a peak of \$180,000 in the first quarter, it will be a moment for us to witness historic changes!

In the current market environment, we not only achieved considerable profits in the contract market this week, but also achieved significant profit results in the spot market under the strong promotion of the Market Value Management Plan. Although the current results are gratifying, there is still a certain gap from our January goal: to help 1,000 members achieve a profit of one million US dollars and lead 100 members to break through the profit of 10 million US dollars. In addition, our ultimate goal - to lead more than 80% of partners to achieve a profit of one million US dollars, requires the joint efforts of every partner to achieve.

So far, 58 of the members who have joined the partner program have successfully exceeded 10 million US dollars in profits, and 694 have achieved 1 million US dollars in profits. Although we are only one step away from our goal, time is running out, and next week will be a critical week for us to sprint. This is the last week of January and the last chance to achieve our goal.

Therefore, I hope all partners can keep up with our pace, prepare funds in advance, arrange time properly, and fully cooperate with our actions. Next, we have at least three important investment opportunities to seize, which will provide us with the greatest help in achieving our goals.

1. Continue the Partner Profit Program and grasp the super data market - the Federal Reserve interest rate decision!

Continue to promote the Strategic Partner Profit Program, accurately grasp the profit opportunities of each contract transaction through the compound interest model, and lead all partners to face the super data market next Wednesday. Next Wednesday, we will usher in the first Federal Reserve interest rate decision in 2025. According to previous data market experience, the influence of interest rate decisions far exceeds the large non-farm and CPI data, and the driving effect on market fluctuations is more significant. This means that we have the opportunity to obtain a single profit of more than 600% in this interest rate decision!

Looking back at this month's performance, whether it was the big non-farm data at the beginning of the month or the super CPI data last week, we have successfully seized the profit opportunities of the data market and created a single excess profit. The Federal Reserve's interest rate decision, as a more important economic event than the big non-farm data, provides us with greater profit potential. Therefore, I once again remind all partners to prepare funds in advance, arrange time properly, and fully cooperate with the plan. At the same time, if conditions permit, try to join a higher-level group. A higher-level partner group can capture more profits under the same data market and bring you more significant asset appreciation.

Although we are still some distance away from achieving our January goal, I am confident in this challenge! Next week we will go all out to sprint towards our profit target. If you missed this week's opportunity due to personal life or work arrangements, don't feel sorry. Staying in the past

will only drag down your mentality. Seizing the present is the wisest choice. Super Data Market has huge profit potential and is a key node for you to quickly increase your total asset return rate. You must not miss it!

According to historical data analysis and our recent crypto market trading experience, next week's super data market will have a huge impact on the U.S. stock market, and everyone must pay attention to risk avoidance. For the crypto market, this environment is a great opportunity to "pick up money for free"! Let us take action to seize every profit opportunity that comes next, strive to hit new highs, and firmly move towards the goal of a million-dollar profit!

2. The EVW Token Market Value Management Plan 2.0 will be fully promoted next week. In the past two days, the increase in EVW has slowed down compared with the previous few days. This is not accidental, but our deliberate arrangement. We have reached an agreement with the institution to take a steady approach instead of pushing up the price too quickly. Too fast a price increase may attract unplanned funds to follow suit and interfere with our market value management plan. In order to ensure the smooth progress of the plan, we have chosen a more stable strategy.

In addition, considering that some students' funds have not yet been fully secured, I specifically suggested that the institution should not raise the price too quickly at this stage, so as to reserve opportunities for more students to participate. Since I promised not to abandon any student before the implementation of the plan, I will definitely fulfill this promise and ensure that all partners have the opportunity to participate and benefit.

Our first goal is to push the EVW price above \$24, and the current price still has nearly 300% room to rise from this goal! The earlier you buy, the lower the cost and the higher the return, which is an obvious logic. Please hurry up and prepare the funds, and please contact the assistant in advance to make an appointment. The assistant will arrange the best time and price for you to buy. This is a rare opportunity to grow wealth, don't wait until the price rises further before you regret it.

At the same time, I would like to emphasize again that in the next market fluctuations, no matter how the EVW price fluctuates in the short term, please stay calm, follow the plan, and do not act privately. Only when every student can strictly follow the plan, the market value management plan can be smoothly promoted and ultimately achieve the goal. Please always remember that our first goal is to push the EVW price above \$24. After waiting for the price to rise to the target price, we will not sell all of it immediately, because this will cause a sudden price drop. Those who sold first may have made a profit, while those who sold later will see their profits shrunk significantly due to the sudden price drop. This is unfair to the students who sold later. So I will not allow this to happen. Therefore, I will notify everyone to sell in batches and in an orderly manner, so that the price will remain stable and everyone's overall interests can be guaranteed. Next week, we will fully accelerate the Market Value Management Plan, which is not only to help all partners achieve the goal of millions of profits, but also a historic opportunity. Friends, now is the best time to act! Let us work closely together, seize this rare opportunity, and move towards

EVW Business School

the peak of wealth together!

3. High-quality ICO projects are about to debut!

Earlier, I told you that our strategic partner BFXCOIN Trading Center will launch a series of heavyweight high-quality ICO projects in 2025, absorb more high-quality resources, further enhance market influence, and provide users with more attractive benefits and value. ICO projects are not only standard risk-free profit opportunities, but also one of the most favorite investment options for whales. Today, I will explain the importance of this project and why ICO projects are hailed as risk-free profit opportunities.

What is ICO?

ICO (Initial Coin Offering) is a unique and attractive way to invest in the crypto market. If you are not familiar with ICO, you can compare it to IPO (Initial Public Offering) in the stock market: although they belong to different markets, their core principles have many similarities.

An ICO is an opportunity for an emerging crypto project to sell tokens to the public for the first time. Just as in an IPO, you can buy shares at a low price when the company is still in its early stages and enjoy significant appreciation after the company goes public, in an ICO, you can buy tokens at an early price and wait for them to increase in value significantly after they go public.

Why are ICO projects considered as investment "gold"? Because ICO projects have the following unique investment characteristics:

- a. Almost risk-free, high returns: Investors who participate in high-quality ICOs are often expected to get several times or even higher returns.
- b. Short cycle, fast returns: Generally speaking, the participation cycle of ICO projects only takes about a week, and returns can be seen in a short time.
- c. Guaranteed 100% winning: Unlike IPOs, ICO projects have almost no possibility of "failure", and participation means benefits.

These characteristics of ICO are exactly why it has become a "golden opportunity" in the minds of crypto market investors. Dear friends, such a high-quality ICO project is about to debut, and we will provide you with all-round guidance and support. When this heavyweight welfare opportunity comes, we will do our best to help you seize this once-in-a-lifetime opportunity! You just need to be fully prepared!

If you don't know enough about ICO projects, you might as well review Trump's meme coin of the same name, TRUMP, which was launched on January 18. This feat instantly set off the market. In just one day after its release, its market value soared to \$36 billion, which was surprising enough. However, the market's enthusiasm far exceeded everyone's expectations. TRUMP started at an initial price of \$0.1824 and soared to a maximum of \$75 in less than two days, which means a 40,000% surge in two days.

A simple calculation shows that if you invested \$10,000 at that time, your account funds would

reach \$4 million in two days! Such a rate of return is almost unimaginable in the traditional stock market. This case perfectly illustrates the huge opportunities brought by ICO projects, and also tells us what it means to seize the opportunity in the crypto market - only with quick judgment and decisive execution can we ride the wind and waves in this field full of infinite possibilities and reap our own glory!

Well, today's sharing is temporarily here. Next week will be a critical week for us to fully sprint to the goal of one million profit! The next profit opportunities shared today are the key to our goal of achieving one million or even ten million profit. I hope that every partner can plan their time in advance, prepare funds, and meet this crucial challenge in the best condition.

For our profit goal, in order to achieve financial freedom, let us go all out and leave no regrets! Friends, the opportunity is right in front of us, and action is the only choice to change your destiny!

Have a good weekend, see you next week!
