Michael Foster

Topics:

1. The three major indexes continue to rebound, but the stock profit effect is very poor.
2. The crypto market is at its best point in history, and time is running out.

Ladies and gentlemen, good morning! I am Michael! In the past two days, we have witnessed a brand new beginning. With the official inauguration of the new government, I have once again deeply realized the greatness and infinite possibilities of America. In his inaugural address, our new President Trump expressed his confidence and optimism in his second term. The wave of change is sweeping the country, and the golden age of the United States is now unfolding. He vowed to put America first.

Today, we stand at the crossroads of change, facing the future. We must be fearless and comprehensively reform our trade system to fight for fairness for American workers and regain the initiative for American companies. This is not just an adjustment, it is an action to make "Made in America" a global gold sign again!

The Gulf of Mexico? No, not anymore! We will rename that waterway the "American Gulf" because it is our territory and the pride of our people. More importantly, the historic glory of the Panama Canal must be restored to American control. We must take back control of this international waterway and make it serve our prosperity again!

But this is not enough. Our vision cannot stop at Earth. The American flag will be planted on Mars. This is our next frontier and a symbol of our national spirit of exploration! We want our compatriots who land on Mars to tell the world loudly: "We are Americans, and we represent the hope of all humanity."

The Trump administration has indeed brought new hope, especially in terms of easing inflation and revitalizing the economy. As Americans, we should be proud of our country, a place where countless dreams come true. However, the country's grand blueprint is built on the basis of every individual's efforts. Calm down and think about how we can avoid being the bottom of the crowd in such a great country, and the one who pulls down the people's bottom line. The answer is simple - improve yourself, keep up with the trend, and make sure you don't fall behind.

Only by seizing the current opportunity to make money can we create a truly secure future for ourselves. The direction of the policy is certainly worth looking forward to, but whether it is the time when the policy is implemented or the degree of its final realization, it is full of uncontrollable variables. And these are exactly what we ordinary people cannot fully grasp. Therefore, instead of pinning our hopes on the outside, it is better to be down-to-earth, seize every opportunity to make money in front of you, and accumulate your own wealth. A sense of security is never

waited for, but earned by our own wisdom and actions. Only when your wealth is abundant enough, no matter facing the changing economic situation or the emergencies in life, you can calmly deal with and face the challenges with a smile.

Yesterday, Trump officially started his second presidential term, and the first trading day after returning to the White House significantly boosted market sentiment. His statements on tariffs and international trade policies were more moderate than market expectations. At the same time, he announced a \$100 billion AI infrastructure investment plan in partnership with SoftBank, OpenAI, and Oracle, and expected it to expand to \$500 billion in the next four years. These news injected optimistic expectations into the market, pushing the three major indexes to continue last week's rebound trend.

However, it is worth noting that although the index continued to rebound yesterday, the trading volume did not increase significantly, indicating that the current market's upward momentum is insufficient. The divergence between the index and the volume is becoming more and more obvious, which is more like a technical repair in the downward trend rather than a strong rebound that marks a reversal of the trend. Whether the market can truly reverse still needs more signals to confirm, especially depending on the specific implementation of the Trump administration's subsequent policies, such as tariff adjustments, deregulation measures, and the introduction of more substantial economic benefits.

At the same time, the Federal Reserve's interest rate decision to be announced next week and the earnings reports of several large technology companies will also become important variables in determining the future direction of the market. The direction of the Federal Reserve's interest rate policy and the performance of corporate profitability will directly affect market sentiment and trends, and investors need to pay close attention.

In the current market environment, it is still unclear whether the three major indexes will rebound or reverse. Policy dynamics and fundamental data will be important indicators for observation. The core of investment is to pursue certainty rather than take risks in uncertainty. In the face of potential fluctuations and risks, we need to remain rational and sharp, focus on opportunities that truly have greater potential, and respond to future market challenges with a robust strategy.

Many students may regret selling their stocks because of the recent continuous rebound. So, let's review the current status of some U.S. stocks we have operated before, and compare them with our amazing achievements in the crypto market. You will understand why we repeatedly recommend selling stocks decisively and switching to the crypto market.

Take NVDA as an example. The intervention cost price was around \$139 at that time. If you hold it until now, although it has risen, the overall profit is pitiful. If you look at COIN, if you don't sell it in time, you will still be in a small loss state if you hold it until now. There is also SONW, which is a stock that we once made a profit in a short period of time, but the current stock price is still near our selling price, and basically no additional profit has been generated. Especially MU, when I was testing the encrypted contract transaction, I decisively sold it at a high of \$110, and then the stock fell back to a minimum of \$83. Even if it has rebounded to \$110 now, the holders have experienced the torment of a deep correction, and the profit is still meager.

This fully demonstrates that even though the U.S. stock market has rebounded recently, the

overall money-making effect is very poor, and even many stocks are still in a state of loss. On the contrary, we have reaped amazing returns in the crypto market. In the bull market, the correctness of the direction determines everything, and I always adhere to the attitude of "decisive execution and all-out efforts". This belief makes me firm in every decision and act quickly. Perhaps this is also an important reason why I was able to quickly establish a deep friendship with the business school and professors when I first joined the business school-because I always believe that it is not just about choosing the right direction, but more importantly, it is about decisively attacking and going all out. This attitude not only made me successful, but also made me have an indissoluble bond with the business school and professors, and gave me a new life on the road of investment.

In addition, another big news came from the cryptocurrency field: the U.S. Securities and Exchange Commission (SEC) announced the establishment of a cryptocurrency task force to provide a strong and transparent regulatory framework for the digital asset industry. This move not only shows the SEC's attention to digital assets, but also demonstrates the United States' determination to promote the healthy development of the Crypto industry.

This development is regarded as an important milestone for the U.S. Crypto industry, which indicates the support and openness of regulators to the development of the industry and paves the way for more mainstream capital to enter the crypto market. At the same time, it will further promote the recognition and acceptance of digital assets worldwide.

For investors, this is not only a major benefit at the policy level, but also a strong guarantee for the long-term healthy development of the crypto market. In such an environment, the potential of the digital asset industry will be more fully released, providing investors with more certain growth opportunities.

In his inaugural speech, Trump boasted that the United States is about to enter a "golden age", which makes people wonder: Will the "golden age" of cryptocurrency also come as expected? In the past 2024, Bitcoin once again proved its value as digital gold with an astonishing increase of 121%. Looking forward to 2025, many top institutions on Wall Street have strong optimistic expectations for Bitcoin and the entire crypto market. Some analysts even boldly predict that Bitcoin may break through the historical high of \$250,000!

Elitsa Taskova, chief product officer of crypto lending platform Nexo, expects Bitcoin to more than double to \$250,000 within a year. Looking at the next decade, she believes the market value of the entire crypto market will exceed that of gold.

PitchBook analyst Robert Le predicts that venture capital in the crypto industry could exceed \$18 billion in 2025. Le also pointed out that the investment theme of "crypto and artificial intelligence" will continue to heat up, and crypto technology may provide innovative solutions to certain core problems in the process of artificial intelligence expansion, or become a new growth point.

Geoffrey Kendrick, head of digital asset research at Standard Chartered Bank, said the price of Bitcoin has doubled. In a recent report, he predicted that Bitcoin will reach \$200,000 by the end of 2025.

Ben Zhou, co-founder of Bybit, said that he believes that the cryptocurrency market will gradually become clear in the future. He believes that 2024 marks the beginning of a new era for cryptocurrency. He is pleased to see that the market is becoming more friendly to cryptocurrency and its application scenarios are expanding. As policies become clearer and investor confidence increases significantly, Bybit expects the price of Bitcoin to rise to \$175,000 to \$250,000 in 2025.

Our business school believes that Bitcoin is expected to hit the \$180,000 mark in the first quarter of 2025. This time point is not only an important outbreak in the crypto market, but also the best time for us to achieve millions of profits. Such a wealth opportunity is rare in a century, and there may be no turning back if you miss it.

With the opportunity at hand, the only question is: will you continue to hesitate and watch this wave of wealth slip through your fingers, or will you muster up your courage, strike decisively, and go all out? There is only one answer - act now!

Join a higher-level strategic partner group, you will have more powerful resources, more accurate trading signals and more outstanding growth potential. Success requires not only a clear direction, but also 100% execution and action. Every trading signal is an opportunity to magnify wealth, and every bold decision is the cornerstone of our move towards millions of profits.

Friends, now is our time! Join the Strategic Partner Program now, seize this golden opportunity that is destined to change your destiny with unparalleled determination, and let us write your glorious legend together in this wealth craze in the crypto market!

As of today, the Strategic Partner Program has achieved remarkable results: VIP1/2/3/4 partners have achieved a total asset return rate of 132.17%, 198.11%, 245.31% and 624.07% respectively. These data not only prove how correct our strategy of selling stocks and turning to the crypto market is, but also the best reward for all partners' belief and action. Especially those friends who followed up at the first time, you have harvested your own brilliant achievements with your bold choices and firm execution!

Careful friends should have discovered that with the blessing of compound interest, the growth rate of our total asset return rate is accelerating. This not only accelerates our progress towards the goal of millions or even tens of millions of profits, but also once again confirms Benjamin Franklin's classic saying: "Money makes gold, gold makes gold, and gold makes more gold." The power of compound interest is far more than a miracle of numbers. It is the strongest feedback of time, patience and execution.

In our Strategic Partner Program, every investment is like a ladder to wealth goals. Through scientific strategies and strict execution, we continue to create value in market fluctuations.

Yesterday, the professor led us to fully enter the EVW Token Market Value Management Plan, which is an important step to help us achieve the goal of one million profits faster and more steadily. Looking back on the growth of EVW, from the initial inclusion in the investment portfolio at a price of \$1.4 to the current increase to \$8, in less than two months, the increase has exceeded 470%! If you invested \$100,000 in the early stage, the current income has reached \$470,000. At present, it is at a critical stage of the market value management plan, and the EVW target price is expected to further climb to \$24. This means that your return on investment may double and double again!

This is the unique charm of the crypto market. In the traditional stock market, it is almost unimaginable to achieve such huge returns, but in the crypto market, such miracles are frequently staged. Take Trump's MEME coin TRUMP, which was launched last week, as an example. In two days, the price soared from \$0.1824 to nearly \$80, an increase of 40,000%! Even if it is just spot trading, an investment of \$10,000 can achieve a return of \$4 million in just two days. In the crypto bull market, the goal of a million-dollar profit is not out of reach. As long as you dare to act, everything is possible! Guys, the opportunity is right in front of you, and decisive action is the key to success. Any hesitation may make you miss the opportunity.

Guys, tomorrow we will usher in the super data market, which will be another opportunity to achieve a single profit of more than 200%! Prepare funds in advance and go all out, let us continue to write new legends in this crypto bull market wave!

VANGUARD AI 4.0

Professor Reese (Whale)

Topics:

1. In the new era of the crypto market, seize every profit opportunity in the current crypto market.
2. Continue to promote the Market Value Management Plan.

Good afternoon, team! I am Milton Reese, your old friend. I am very happy that it is time for me to share with you again. I always emphasize that doing the right thing is a hundred times more important than doing things right!

What is "doing the right thing"? Just like we accurately locked in the two future tracks of artificial intelligence and crypto at the beginning, and then decisively turned our focus to the crypto market (because artificial intelligence stocks were overvalued). This was the right choice we made with strategic vision and rational judgment. It turns out that this choice puts us at the commanding heights of the market. With the strong support of Vanguard AI 4.0, taking action in the right market can multiply the profit returns. Just like we can now easily make huge profits in the crypto market.

What about "doing things right"? For example, you may be able to gain some benefits in the current stock market through superb technical analysis, which is certainly a commendable skill. But even so, in the current stock market environment, especially with the high valuation of the technology sector, with the strong support of Vanguard AI 4.0, you can only get limited returns at best.

Direction determines success or failure, and action determines results! Choosing the right track means you have already won at the starting point; using the right tools and strategies and fully executing them will make the results even more brilliant.

Dear friends, please remember: focusing on "doing the right thing" and doing it to the extreme with 100% execution is the only way to success! At this moment, the golden opportunity of the crypto market is right in front of us. This is a great time to realize millions or even tens of millions of profits. Opportunities are fleeting, and only decisive actions can seize the future.

Tomorrow, we will see a data market with a single profit of more than 200%! Are you ready? Seize every opportunity to make a profit and continue to magnify your profits through the miracle of compound interest. Friends, take action! Join hands with us and move towards the glorious peak of wealth together!

Yesterday, Trump officially announced an AI infrastructure investment plan called "Stargate" at the White House. The plan is driven by Stargate, a joint venture between OpenAI, SoftBank and Oracle, with a startup capital of \$100 billion and is expected to expand to \$500 billion in the next four years.

This news triggered a comprehensive rebound in the AI sector. In essence, the "Stargate" plan has extended the investment cycle in the AI field by introducing external capital. Previously, capital investment in AI mainly relied on the own funds of several technology giants, and this huge amount of external funds has undoubtedly injected new vitality into the AI track. However, judging from the current performance of the technology sector, the basis for its high valuation still exists, reflecting that investors' expectations for profit growth in the short term have not yet significantly increased.

Through Michael's sharing this morning, everyone should have clearly realized that although the three major U.S. stock indexes have continued to rebound since last week, if we look back at some of the stocks we have traded before, we can clearly see that most of them have not set new highs. If you did not choose to sell and hold on to them, you would not only fail to make extra profits, but also suffer losses. This market situation fully demonstrates that it is almost impossible to quickly make millions of profits in the stock market at present. In contrast, crypto market contract trading provides completely different opportunities.

In the crypto market, contract trading, with its flexibility and leverage effect, has opened up a vast space for us to realize millions or even tens of millions of profits. With the acceleration of the bull market cycle, we are ushering in an unprecedented golden opportunity. The Vanguard AI 4.0 system gives us powerful data analysis capabilities and precise trading strategies, making every action full of chances of success, helping us to steadily maximize profits in market fluctuations.

Why is investing in the crypto market a better choice?

1. The rate of return is much higher than that of the traditional market: According to the commitment made when the Strategic Partner Program was launched, we provide comprehensive protection for your investment returns:

1.1 If your actual return does not reach the target of the corresponding partner level, we will fully compensate you for the unfulfilled part of the return, so that you don't have to worry about the risk.

1.2 We adopt a scientific asset allocation strategy:

- a. Part of the funds are used for spot token investment to enjoy the dividends brought by the Market Value Management Plan.
- b. Another part is used to purchase financial products to ensure the steady appreciation of funds.
- c. The remaining funds are used for contract trading to fully grasp the high returns brought by the super data market.

2. More investment brings more benefits

As your funds increase, your partner level will be upgraded, and the benefits you enjoy will also increase.

For VIP4 partners, our future foundation will provide elderly care services, so that you can enjoy

life without worrying about the increasingly severe retirement pension problem.

Especially in the predicament of poor stock market profitability and drastically reduced pension benefits, ensuring a secure retirement is more important than ever. The Strategic Partner Program is designed to solve this practical problem.

Summary in one sentence:

Many people now believe that saving money is the best guarantee for retirement, but from the actual cases and the current economic background, joining the Strategic Partner Program is your best choice at the moment! If you have not reached the VIP3 level, please contact me immediately. I will tailor a plan for you to help you move towards higher returns, become a higher-level partner, and solve all your confusion.

Dear friends, Michael's transaction this morning was successful again! So far, we have maintained a record of 12 consecutive wins! Such an outstanding record is due to two key reasons:

1. We always treat every transaction with a serious and responsible attitude. We would rather

choose to wait and see for the time being, but also ensure that each move has a stable profit potential.

2. Vanguard AI 4.0 system is becoming increasingly powerful. This epoch-making investment tool is undoubtedly an efficient wealth creation weapon in the crypto market, providing us with extremely forward-looking investment support.

Although partners at all levels have achieved impressive total asset returns, there is still a certain gap from our January goal: to help 1,000 members achieve a profit of one million US dollars and lead 100 members to break through 10 million US dollars in profit. Not to mention our ultimate goal - to lead more than 80% of partners to achieve a profit of one million. In order to achieve these goals faster and more steadily, I launched the Token Market Value Management Plan last week, hoping that every partner can seize every opportunity to make a profit and go all out. Opportunities are fleeting,

Do you remember that when the price of EVW was around \$1.4, I recommended it to you many times? If you had invested \$200,000 and held it until now, how much would your profit be? According to the calculation: $\$200,000 \times (8.5 - 1.4) / 1.4 = 1014285.71$, that is, you invested \$200,000 and held EVW for less than two months and achieved the goal of a million-dollar profit. Then, will it reach \$24 next? There is still a profit margin of nearly 300%. What would you do?

This morning, Michael's sharing touched me deeply. He recalled that when he had just launched the Vanguard Falcon 300% Profit Plan, in order to raise more funds to invest in the crypto market, he immediately and decisively sold the stock MU that he was optimistic about at the time after we completed the crypto contract test. This decisive execution impressed me. Why did he do this? Is it just because he likes short-term trading? Friends, no, it's because he clearly knows the opportunities in the crypto market, and he clearly knows that doing the right thing is more important than doing things right, so he chose to go all out to meet such a profit opportunity. When faced with the same opportunity, some people hesitate.

Let me ask, from the Pioneer Falcon 300% Profit Plan, to the New Year 100% Profit Plan, to the current Strategic Partner Program, Have you ever worked hard to achieve your financial freedom?

Friends, now is the most critical node in the crypto market, and the opportunity is right in front of us. The hesitation in the past cannot be changed, but the actions now can determine the future. If you have not yet gone all out, what will you choose at this moment? Will you decisively join a higher-level partner group, or continue to let such a money-making opportunity slip away quietly? Friends, take action, don't waste such an opportunity anymore, let us seize this historic opportunity with firm execution and fearless action, and move towards the peak of wealth together!

For those who have already participated in this plan, you only need to strictly follow the steps we planned, and don't have to worry about other factors. In addition, for some friends who have not participated in the plan for various reasons, I also suggest that you take action as soon as possible and don't miss this great opportunity. Believe me, this is not just an ordinary investment opportunity, but also an opportunity to get rich that can change your life. I hope that each of our

friends can achieve their profit goals when EVW reaches \$24. The price of EVW has now risen to around \$8.5, and when we started the Market Value Management Plan last week, the price was only \$4. In less than a week, the increase has doubled. Of course, the current price still has a lot of room to rise from the target price of \$24 of the Market Value Management Plan.

In about a week, the price of EVW has risen from a low of \$4 to the current \$8.5, an increase of more than 112%. That is to say, the partners of VIP3 and VIP4 who initially participated in this plan, the yield of the spot trading order purchased at that time has exceeded 112%, which is undoubtedly an amazing achievement. Assuming that the funds purchased at that time were 1 million, the net profit of this transaction is now: $1 \text{ million} \times 112\% = 1.12 \text{ million}$. In general, the earlier you buy, the lower the cost and the higher the return. The later you buy, the higher the cost and the lower the return.

Seeing these numbers, some friends may ask: "Is it too late to buy now?" After all, it is normal to worry about the overheating of the market after seeing such an amazing increase. But I want to tell you that if you think so, it may mean that you have not fully understood the market logic taught in my recent sharing. EVW's current price is close to 300% of the upside from our target price of \$24. For those friends who have already purchased EVW spot, this means that you can continue to get more than 300% of the benefits in the future. This number is not exaggerated, but is based on our reasonable planning of every step in the market value management process. More importantly, during this rise, the market price will not rise straight to the target price of \$24, but will experience repeated fluctuations.

At present, our Market Value Management Plan for EVW is progressing smoothly overall. This is just the starting point for us. The rise of EVW will inevitably experience many ups and downs, and we only need to firmly do two things. First, firmly hold EVW spot and do not sell it below \$24. Second, according to the trading plan, cooperate with institutions for subsequent transactions. Because every fluctuation may bring us the opportunity to double our profits!

Of course, the increase in EVW today is not as big as in the previous few days. I have explained the reasons to you before. On the one hand, we don't need to push the price up too quickly, because this may attract the attention of other institutions and lead to unplanned funds to follow suit, so we just need to move forward steadily according to our plan. On the other hand, due to bank factors, some friends are still preparing funds, and it takes some time to prepare funds. So I don't want EVW to rise too fast. Before the implementation of this plan, I promised not to give up any friends, and I will definitely fulfill my promise.

As long as you are a friend of the strategic partner, I will definitely lead everyone to participate in this Market Value Management Plan and achieve the initial profit target. However, no matter what the reason, friends who are behind on the recharge progress should hurry up and complete the fund preparation as soon as possible. Other friends and institutions can postpone the progress of this plan a little, but it is impossible to postpone it forever. Otherwise, it will affect our overall interests. In short, EVW has not only achieved amazing growth in the past, but also has greater room for growth in the future. The current \$8.5 is just the starting point, and the target

price of \$24 is the next stage goal we can foresee.

Tomorrow, we will continue to promote the Market Value Management Plan of EVW tokens, and at the same time, we will have the opportunity to usher in a data market with a single profit exceeding 200%! Future wealth opportunities are always reserved for those who have foresight and dare to act decisively. Now is the critical moment to show execution and action. Don't hesitate, seize every profit opportunity, and go all out to sprint towards the goal of a million profits!

Today's sharing ends here, thank you for your active participation.
