Michael Foster

1. The subscription for high-quality ICO officially starts today. Are you ready?

Ladies and gentlemen, good morning! I'm Michael! There will always be many opportunities to change our destiny in life. The key lies in whether we can seize it decisively. The reason why many people are unable to break through themselves is because they keep repeating the same choices but expecting different results. As Einstein said: "The definition of insanity is doing the same thing over and over again and expecting different results." In investment and life, we must constantly reflect and dare to make changes in order to usher in real breakthroughs!

Today, the subscription of the first ICO project in 2025 is just such a once-in-a-lifetime opportunity to make a fortune! This is not only an investment, but also a risk-free, ultra-high return transformation opportunity. After the subscription is successful, your total assets will have the opportunity to increase 3 to 5 times in an instant, and such an opportunity will never appear every day. For all strategic partners, this is a catalyst for the explosive growth of account assets, and it is also a critical moment to accelerate the realization of millions or even tens of millions of profits!

Opportunities will not wait for those who hesitate. Only those who act decisively can ride the wind and waves in the market storm and win their own glory! Now is the time to make a decision, seize this opportunity and let your assets grow exponentially!

Yesterday, the U.S. stock market continued its rebound momentum and the three major indexes closed higher for the second consecutive trading day. However, it is noteworthy that the simultaneous strengthening of some traditional safe-haven assets shows that the market remains highly concerned about the uncertainty of the global economy. Despite the overall rise, there are clear divisions within the technology sector. The performance of some star stocks masks the potential risks of the market.

Chip giant NVIDIA has become the focus of the market. Its stock price has soared by more than 5%, benefiting from AMD's announcement that the AI data center equipped with NVIDIA's Blackwell platform has been officially put into production. In addition, biopharmaceutical company Amgen's stock price rose 6% due to better-than-expected fourth-quarter results, pushing the industrial average higher. However, not all technology giants continue to be strong. Google's parent company Alphabet's stock price plummeted 7% due to lower-than-expected cloud business revenue and increased investment in AI, which has led to doubts about short-term profitability. At the same time, AMD fell 6% due to data center revenue falling short of market expectations, and Apple's stock price also closed slightly lower. The sharp divergence in tech stocks highlights the instability of the current market. Investors should be wary of the deep-seated risks masked by the short-term rebound.

What is noteworthy is that the latest data from JPMorgan Chase shows that U.S. retail investors are pouring into individual stock transactions at an unprecedented speed, especially the inflow of

EVW Business School

funds into AI star stocks has reached an alarming level. On Tuesday, retail investors' single-day net purchases reached \$3.2 billion, about \$1 billion higher than the historical high reached in March 2020. About 70% of the funds flowed to the "Big Seven Technology", setting a record for the largest single-day capital inflow of this group. NVIDIA has become the biggest beneficiary, with a single-day net purchase amount of \$1.3 billion. Retail investors are taking advantage of the short-term correction of tech stocks to increase their positions crazily.

However, the signs of huge risks and structural imbalances in the market hidden behind this "irrational exuberance" are already very obvious. Every time the index pulls back, there is heavy volume, but the rebound is shrinking, which shows that retail investors are mainly driving the rebound, while institutional funds have not entered the market at all, but are quietly leaving! The continued retreat of institutions means that the current rise in tech stocks lacks real financial support. Once market sentiment reverses, the situation of retail investors taking over may lead to a more dramatic decline.

This Friday, the U.S. Department of Labor will release the non-farm payrolls for January 2025. The market expects non-farm payrolls to increase by 170,000 and the unemployment rate to remain at 4.1%. However, Goldman Sachs previously warned that this time the non-farm payrolls may usher in the "largest adjustment in history" because the census revision will significantly increase employment data. The total labor force is expected to increase by 2.5 million people, household employment will increase by 2.3 million people, and the labor force participation rate will increase by 11 basis points. If the non-farm payrolls exceeds expectations, it may further suppress market expectations for the Fed to cut interest rates and even trigger panic selling in the market.

What needs special attention is that the Federal Reserve maintained its benchmark interest rate at 4.25%-4.5% at its January interest rate meeting, but deleted the statement "inflation has made progress towards the 2% target" in the statement and replaced it with "inflation remains high", indicating increased concerns about the risk of "reflation". If the non-farm payrolls exceeds expectations, the Federal Reserve may further delay the process of cutting interest rates. Even if inflation rebounds, the market may reconsider the possibility of raising interest rates, which will have a huge impact on the currently highly valued tech stocks.

Risks in U.S. stocks are accumulating rapidly, and investors need to be wary of short-term rebound traps

1. Technology stocks are polarizing violently, institutional funds are withdrawing, and retail investors are enthusiastic about taking over. The market is extremely prone to a "beating the drum and spreading the flowers" style collapse.
2. Non-farm payrolls may usher in major revisions, and higher-than-expected growth may delay interest rate cut expectations and even increase market adjustment pressure.
3. The Fed's policy stance has undergone subtle changes, the risk of "reflation" has intensified, interest rates have remained high for a long time, and the liquidity tightening environment will exert long-term suppression on the market.
4. Market risk aversion has increased, and safe-haven assets such as gold and bonds have

strengthened, suggesting that investors are not optimistic about the economic outlook.

The current short-term market rebound may be just a respite before the bear market decline. Please do not be fooled by the appearance. The high valuations of tech stocks, uncertainty about interest rates, abnormal capital flows, and the strength of safe-haven assets are clearly indicating that risks in the U.S. stock market are rapidly accumulating. Facing a major market correction that is about to hit, the only correct choice is to decisively adjust the strategy to avoid being induced by short-term rebounds to blindly add positions to prevent the risk of falling into a deep correction!

Although the money-making effect of the stock market continues to weaken, our Strategic Partner Program still maintains an amazing winning streak! This achievement is not only the best verification of our trading strategy, but also a rich reward for the team's accurate judgment and unremitting efforts. In the current context of market turmoil and capital influx, we have successfully avoided the systemic risks of U.S. stocks through precise market analysis and flexible operation strategies, while seizing valuable opportunities in the crypto market. Our partners have achieved profit targets that exceed expectations, demonstrating the powerful power of stable compound interest.

However from a trading perspective, contract trading has high profit potential, it is still accompanied by certain market fluctuations and risks. In contrast, the ICO projects we are currently focusing on are almost zero-risk investment opportunities based on historical data! Why to say that? Because for high-quality ICO projects, once the subscription progress bar exceeds 100%, it means that the opening price of the GLK project on the day of listing will not be lower than the issue price. In other words, the listing premium has become inevitable! This determines that the subscription stage is the best time to lock in profits, rather than a speculative game. The profit logic of ICO is completely different from traditional trading. It is a natural arbitrage opportunity determined by market supply and demand, without the need to bear the uncertainty brought by market fluctuations. This means that we can not only obtain excess returns, but also ensure the safety of the principal. This is the true risk-free arbitrage!

Moreover, compared with the traditional stock market, ICO projects are undoubtedly an excellent shortcut for ordinary investors to achieve a wealth jump! Stock investment not only has a high threshold, but also requires deep financial knowledge, complex operating procedures, and in-depth research on financial statements and industry data. ICO has completely broken these restrictions and opened the door to wealth for everyone who desires success!

1. Zero threshold, everyone can participate!

You can become an early investor in innovative projects without the need for advanced financial knowledge or tedious analysis and research. Opportunities for wealth have never been so fair. As long as you are willing to take the first step, you can stand on the edge!

2. Simple and direct, start the huge profit mode with one click!

The operation of ICO subscription is extremely simple. You only need to register an crypto wallet, select the project you like, and follow the instructions to complete the purchase! Compared with the tedious account opening, fund review, and complicated operations in the stock market, the convenience of ICO allows everyone to easily get started and quickly enter the investment market!

3. The return is astonishing, dozens of times better than traditional investment!

High-quality ICO projects are usually in the early stages and have extremely low investment costs. Once successful, their token prices may experience exponential growth! Revenues of several times or even dozens of times are not a myth in the ICO market, but a reality! Compared with the slow appreciation of the traditional stock market, ICO is the real track for wealth explosion!

4. Flexible funds, easy entry and exit at any time with full control!

Unlike long-term lock-ups or capital freezes in the stock market, most of the tokens invested in ICOs can be traded freely with extremely high capital liquidity, allowing your wealth to truly increase in value and be liquidated at any time, fully in line with the needs of modern investors for capital flow!

Guys, the opportunity is right in front of you, the key is whether you dare to go all out and take

EVW Business School

decisive action!

At this moment, we are standing at a critical node of wealth transition, and there are two clearly visible ways to "pick up money" in front of us - one is the high-quality ICO project that is being actively subscribed, and the other is the non-farm payrolls that will detonate the market tomorrow! These two gold-level investment opportunities are not only the best gifts given by the market, but also a key battle that determines whether we can completely break through the million-dollar profit in February, and even reach the peak of tens of millions of profits!

The market will not stand still for anyone's hesitation and hesitation, and the door to wealth will only be open to those who dare to act and strike decisively! If you are still on the sidelines, still waiting for the so-called "perfect time," then remember - the market never slows down for anyone, and the real winners are always those who dare to seize opportunities, not hesitant bystanders.

Now, the only thing you should do is act immediately! Increase capital investment, upgrade your partner level, and go all out to seize this wealth craze! This is a key opportunity to achieve your profit goal this month, and it is also the best window for a wealth jump in your life! Opportunities do not wait, success only belongs to those who dare to fight and make quick decisions!

Regarding the return rate of ICO, we don't need to talk empty talk. Take a look at a few actual cases and you will understand its huge value.

1. BTC: The originator of cryptocurrency. Its success was like the title sequence of an epic movie, directly igniting the entire market. The price of Bitcoin was almost negligible in 2009. Now it has become the "gold" of the digital currency market, with the price of one Bitcoin approaching \$100,000. As the pioneer of blockchain technology, Bitcoin's future is still full of endless possibilities and exciting.
2. ETH: If you participated in the ICO of Ethereum (ETH) in 2014, the price at that time was only \$0.3. By November 2021, ETH had risen to a maximum of \$4,800, with a yield of more than 16,000 times! This means that the initial investment of \$1,000 has soared to \$16 million in just a few years, which is a myth of wealth!
3. SOL: In 2020, Solana (SOL) conducted an ICO at a price of \$0.22. In just one year, its price soared to \$260 in November 2021, with a return rate of up to 1,100 times! In other words, an investment of \$1,000 in SOL turned into \$1.1 million in just one year. Such a miracle can only be created by the ICO market!

Guys, history doesn't repeat itself but fortunes often follow similar paths! The past ICO legends are not just historical data, but cases of wealth transition that are constantly happening in reality. The real charm of ICO is that it allows ordinary investors to stand at the starting point of innovative projects, lock in high growth potential in advance, and enjoy returns that exceed the traditional market by hundreds or thousands of times!

The first high-quality ICO project in 2025 has officially opened for subscription. This may be the starting point for the next wealth miracle! This opportunity does not require waiting for one, three or even five years, but a golden investment window that can achieve high returns in a short period of time. Based on the current market conditions, we are confident that we can achieve our

EVW Business School

profit target of more than 5 times within one month!

Opportunities always belong to those who act decisively! Please contact the assistant immediately to ensure that the subscription is completed as soon as possible, and don't miss this great opportunity for wealth to explode!

Not only that, tomorrow's non-farm payrolls will detonate the market. This is another opportunity to achieve a profit of more than 600% in a single transaction! Two major wealth opportunities are already before us. Are you fully prepared?

That's it for today's sharing. Please go all out and stay tuned for the professor's sharing later!

Feb.6-2025 EST.

4:00 PM

Professor Reese (Whale)

Sharing topic:

1. GLK subscription progress has exceeded 100%! This is a real risk-free arbitrage. Did you apply for it as soon as possible?

Good afternoon, team! I'm Milton Reese, your old friend.

Dear friends, are you as excited as I am? Have you felt the shock wave of wealth soaring? The subscription progress bar of GLK has exceeded 100%! What does this mean? It means that the price of GLK when it is listed will not be lower than the issue price, that is to say, the subscription at this moment is a real risk-free arbitrage!

You only need to subscribe to lock in stable returns! There is no need to worry about the risk of market fluctuations like contract trading. Steady profits are the real way for high-end investors! Such opportunities are not common. Only those who dare to act decisively can truly seize the dividends of the times!

Many people always have ambitious wealth goals but always stay in the stage of waiting and hesitating. They have become "giants in thought and dwarfs in action", missing golden opportunities again and again, watching others succeed but still sitting still! At this time, those investors who have subscribed to GLK have firmly locked in risk-free profits, and are you still hesitating?

The essence of wealth lies in decision-making rather than waiting! Since the launch of the "Millionaire Training Camp", we have completed multiple profit plans in succession. Every precise attack has proved that our strategy is correct. Whenever the market welcomes a vent, we always stand at the forefront and lead all partners to accurately grasp the wealth opportunities!

Today, GLK subscription officially enters the sprint stage! The subscription progress bar has soared, and market funds have poured in crazily. All data are telling us: This is an unprecedented opportunity!

But remember, the market will not stop for your hesitation and wealth will not wait for your hesitation! History has proved that those who act decisively are the real winners!

Now is the best time to act! Participate in the subscription immediately, lock in your risk-free arbitrage opportunities, and give your assets the opportunity to achieve exponential growth! Don't wait until you miss it to regret it, opportunities are only for those who dare to take action! This is not just a subscription, but also a critical moment for us to achieve millions or even tens of millions of profits this month! Go all out and go straight to the peak of wealth!

Dear friends, the GLK project has made a strong debut! And the subscription progress bar has soared to 124%! Listen, this is crazy, far beyond my expectations!

Originally, I expected that it would take 1-2 days for the progress bar to break 100%. But now, the GLK project has shown us with actual performance that this is an investment miracle that cannot be missed!

As Michael just mentioned:

- When the progress bar breaks 100%, the opening price of the GLK project on the day of listing will not be lower than the issue price.
- From this key point, all the funds that have successfully won the lottery have entered the "zero risk zone" and there is no risk of loss!

At this moment, there are only 5 days left before the GLK project goes public! Dear friends, have you all shown your excellent execution today and completed the subscription as soon as possible? Please reply to me now and tell me your actions! You can also send me a private message immediately.

In order to help everyone sort out the current investment focus, please take notes. Now, please think carefully and ask yourself a question:

In this era, will this wave of high-quality ICO investment be the only super wealth opportunity in your life?

Why is this a unique opportunity?

It is well known that the ICO investment wave is not always available. In fact, it often only kicks off at the beginning of each year, and only in the stage of the crypto bull market can it release the strongest profit effect. This scarcity and uniqueness determine its value!

So, now please ask yourself seriously:

In the limited years of life, once such an opportunity is missed, will it come again?

When you realize this, take a look at the three top advantages of the ICO project, and you will be more determined in your choice.

Three top advantages of ICO projects

1. Potential for risk-free profit

- When the subscription progress bar breaks through the key point of 100%, your investment will enter the "zero risk zone",
- Make money as soon as it is listed, no trading skills are required, just participate!

2. Short participation cycle, no threshold

- From subscription to listing, it usually takes only a few days, which is extremely efficient and does not require a long wait.
- Zero threshold restrictions: There are no rules and regulations on nationality, funds or experience, and everyone can easily participate.

3. 100% winning, no room for disappointment

- Unlike traditional IPOs, the rules of ICO determine that each participant can get a distribution ratio.
- There will be no "no harvest" situation, and every investor can feel the value of participation.

Let's look back at the crazy performance of the GLK project! A few hours after listing, the subscription progress bar has entered the "risk-free zone"! So friends, are you clear now? The

EVW Business School

GLK project is not just an ordinary investment, but a turning point for you to change your destiny. Seize it, and you will seize the miracle of wealth!

Dear friends,

There are only a few days left before the GLK project subscription ends and it will enter the listing and issuance stage! If you haven't participated yet, now is still the best time. Time is short, but the opportunity is right in front of you!

From now on, please pay close attention to the growth of the GLK project subscription progress bar! Because it will be closely related to our income:

- The progress bar grows rapidly: it means that the number of participants is increasing and the capital pool is getting bigger.
- This represents the trust and enthusiasm of the market: just like electing a president, the participants' capital vote symbolizes their recognition of the project and their confidence in going long.

Just as Trump himself launched the eponymous MEME coin, TRUMP, on January 18, this feat instantly detonated the market. In just one day after its release, its market value soared to \$36 billion, which was already surprising enough. However, the market's enthusiasm far exceeded everyone's expectations. TRUMP started at an initial price of \$0.1824, and in less than two days, it soared to a maximum of \$76.94, which is a 40,000% surge in two days. This is exactly the profit effect of ICO projects! Whether it is the TRUMP project or the GLK project, it verifies what we have always emphasized: the three top advantages and scarcity effect of crypto ICO projects!

A simple calculation shows that if you invested \$10,000 at the time, your account funds would reach \$4 million in two days! Such a rate of return is almost unimaginable in the traditional stock market. This case perfectly explains the huge opportunities brought by ICO projects, and also tells us what it means to seize the opportunity to catch the wind in the crypto market-quick judgment and decisive execution can ride the wind and waves in this field full of infinite possibilities and reap your own glory!

At this moment, TRUMP is a thing of the past! The craziness of the GLK project has just begun. I expect the GLK project to bring 3 to 5 times the return when it goes public! Therefore, we must take action to protect our winning allocation ratio. As the progress bar grows rapidly, the funds voting for the GLK project continue to increase, and our allocation ratio may be further diluted! Only additional subscriptions can ensure that our ratio and benefits are maximized.

Please take action immediately. If you have any questions or need help, please contact me as soon as possible and I will do my best to help you solve the problem!

Dear friends, congratulations again! On this special day, Michael led all partners to complete an outstanding transaction in the morning and harvested gratifying profits! As we mentioned before, the two core opportunities that are most worth investing in are:

1. Contract trading
2. ICO project subscription

Next, I strongly recommend that you use all the profits from each contract transaction to subscribe to the GLK project! As we can see, the subscription progress bar of the GLK project is continuing to grow, and each new fund represents a strong long-term force. Only by adding subscriptions and superimposing subscriptions can we ensure that the distribution ratio we obtain is not diluted and maximize the profit potential! Therefore, the core strategy of this week is divided into two points:

1. Fully grasp the profit potential of the GLK project This is a super wealth opportunity that is rare in a few years. We must not only participate decisively, but also verify the results of the GLK project through practical actions. Use the profits from contract trading to subscribe to the GLK project and further enhance our advantages! Ensure that we can obtain matching returns.

2. Continue to focus on contract trading

Continue to accelerate the realization of strategic partners' profit goals through contract trading, laying a solid foundation for the subsequent listing of the Vanguard AI 4.0 system.

Dear partners, whether it is the strategic partner program or the subscription opportunity of the current ICO project, if you have any questions or need further guidance and strategic support, please contact me immediately! I will do my best to answer you and ensure that you can seize every key profit opportunity!

Please remember: I will always be your strong backing, and our goal is always the same - go hand in hand and move towards a higher peak of wealth together!

In addition, we will also usher in the non-farm payrolls tomorrow! Remember the last non-farm payrolls? The highest single profit exceeded 600%! This data market is also an excellent contract trading opportunity. All partners are requested to prepare funds in advance to ensure that they can fully participate!

Opportunities will not wait for anyone, and action can create wealth! Let us seize this wave of market waves and lock in the maximum profit! Today's sharing is here, see you on the non-farm payrolls battlefield tomorrow!
