1. The trade war has officially begun, and U.S. stocks will face more uncertainties in the future.
2. This week's super non-farm payrolls, are you ready for it?

Good morning, team! I'm Milton Reese, your old friend. Today is not only the beginning of a new week, but also our first trading day in February. Dear friends, February may be the last month of our strategic partner plan, and it is also our goal of reaching a million or even tens of millions of profits. Critical stage! Looking back on every transaction in the past and every accurate market judgment, we have laid a solid foundation for profitability step by step. And now, I want to ask you - what is your return on total assets? Are you ready for the ultimate sprint in February?

This Friday, we will usher in the super non-farm payrolls that the market is eyeing! Do you still remember the brilliant performance when the non-farm payrolls was released last time? We accurately targeted the market and achieved an astonishing return of 600% on a single transaction, and the total assets of many senior partners' accounts were directly doubled! All this proves the trading rule of precise strategy + decisive execution = explosive returns!

This week, we will go all out to achieve greater success and replicate or even surpass this crazy profit effect.

February is the decisive month for us to strive for millions of profits, and this Friday's super non-farm payrolls is about to hit! This is the most critical profit window this month. Opportunities are fleeting. Make sure you have sufficient funds in your account and fight with all your strength!

Now is the perfect time to invest more and upgrade your holdings to maximize your trading returns! Joining a higher-level partner formation will not only obtain more exclusive trading signals and resource allocation, but also further improve profit efficiency. Look at the performance of VIP4 partners - the current return on total assets has reached over 1300%! Data is the best proof that you can also copy their success!

Accurately grasp the market rhythm, strictly implement trading signals, and eliminate hesitation and random operations. Combined with the compound interest effect to amplify returns, take advantage of market fluctuations to achieve a wealth jump!

The market will not stop for those who hesitate. The real winners will always be those who have firm convictions and act decisively! Now, lock in the super non-farm payrolls, seize the profit opportunity, sprint with all your strength, and prepare for the final glory! Let this moment be a historic turning point for your wealth growth!

Last Friday, after Trump clearly announced an additional 25% tariff on imported goods from Mexico and Canada and a 10% tariff on imported goods from China, the three major indexes quickly turned from rising to falling, and plunged sharply in late trading last Friday. Subsequently, Trump signed an executive order last Saturday to formally impose a 10% tariff on Chinese goods, a 25% tariff on imported goods from Canada and Mexico, and an additional 10% tariff on Canadian energy resources. This decision quickly shocked the global market. Canada and Mexico immediately announced the implementation of tariff countermeasures, and China also stated that it would take corresponding measures. Affected by this, U.S. stock market sentiment has deteriorated sharply. After the U.S. stock index turned from rising to falling last Friday, it continued to open sharply lower today.

The escalation of the trade war has not only reshaped the market landscape, but also brought deeper uncertainty to the U.S. stock market. First, the tariff policy will directly push up the production costs of enterprises, causing increased pressure on the supply chain and severely squeezing profit margins. For manufacturing, tech stocks and consumer goods industries that rely on global supply chains, rising costs will weaken profitability, force companies to reduce capital expenditures, slow down business expansion, and even affect the stability of the job market. The market's growth expectations for these sectors are being re-evaluated, especially for tech stocks that are already at high valuation levels, and the risk of a correction is gradually increasing. NVIDIA continues to fall sharply today, with a cumulative correction of nearly 20% since last week. This may be just the beginning of the adjustment. More tech stocks will fall by more than 30% in the future!

At the same time, the market still underestimates the long-term impact of tariff policies on inflation. As import costs rise, the prices of commodities and production materials will inevitably rise, and companies' production costs will increase. Eventually, these costs will be passed on to consumers, causing the overall price level to continue to rise. The decline in consumer purchasing power may further inhibit economic growth and form a vicious cycle. Against this background, the Fed's policy adjustments will become more complex. If inflation continues to rise, the central bank may be forced to postpone interest rate cuts or even maintain high interest rates for a long time to combat inflationary pressures. Market liquidity has further tightened, financing costs have increased, and investor confidence has been frustrated, resulting in increased stock market volatility and a more severe overall investment environment.

What is certain is that a comprehensive escalation of the trade war will not only drag down global economic growth, but will also exacerbate systemic risks in the U.S. stock market. The violent fluctuations in the market have just begun, and there may be more substantial adjustments in the coming weeks. The current trend of U.S. stocks has completely verified our judgment that the market is at a critical point of accelerating its decline.

Here again, I would like to emphasize: in a downtrend, any rebound is only a short-term correction, not a signal of market reversal. For investors, this is the best time to clear out their positions and reduce their risk exposure, rather than blindly buying the bottom. Currently, the U.S. stock market as a whole has entered a weak situation, and those investors who still imagine that

the market can recover quickly may soon face a more cruel reality.

With the official start of a full-scale trade war and the fact that inflation remains high and is likely to worsen, downward pressure on U.S. stocks is accumulating. In the future, the U.S. stock market is about to undergo deeper adjustments.

I have already analyzed the core reasons for the deep correction of US stocks for everyone a long time ago:

1. High valuation pressure:

Big technology stocks have experienced a super bull market for two consecutive years, and the overall stock index valuation has reached an extremely high level. The market is currently entering a natural correction phase.

2. The core driving force disappears:

The core driving forces of the two-year bull market in U.S. stocks - the AI craze and expectations of interest rate cuts, have now announced a pause, and the market lacks support for further gains.

3. The trade war officially begins:

Trump's comprehensive tariff policy has officially begun. His tariff policy and immigration policy are bringing greater uncertainty to the market and exacerbating the market's risk aversion.

Today's market performance once again confirms the accuracy of our judgment! The continued decline of the stock index clearly shows that the stock market is at the tail end of the bull market and is about to enter a downward channel. In such a market environment, the most sensible strategy is to decisively clear out U.S. stocks and temporarily withdraw from this high-risk market. In a bear market, staying sober and decisive are the most valuable qualities for investors. A short absence is not a failure, but a matter of accumulating strength for the next victory. When the market returns to rationality, we will return to the battlefield with a stronger attitude and achieve greater profits!

So, how should we adjust our strategies and seize more explosive investment opportunities? The answer is very clear - move to the crypto market and welcome the upcoming gold investment window!

Super non-farm payrolls - This Friday, we are about to usher in the most important trading opportunity of the month. The market fluctuations caused by the release of super non-farm payrolls are expected to bring us more than 600% of single profit margins! In the last super non-farm payrolls, our precise strategies helped VIP partners achieve amazing profits, and this time, we are confident to achieve greater success!

High-quality ICO projects - The high-quality ICO projects announced by the BFXCOIN exchange last week may enter the subscription stage this week. ICO is not only the most popular investment method for whale-level funds in the market, but also one of the best shortcuts for ordinary investors to achieve a wealth jump. We are currently in the golden period of market

**EVW Business School**

layout, and participating means taking the lead in the market!

There is no shortage of opportunities in the investment market. What is lacking is the determination and execution to seize the opportunity! Right now, the U.S. stock market is in turmoil, but the crypto market is ushering in an opportunity. This is an era that belongs to the strong. The real winners will not wait passively, but will decisively switch tracks and look for opportunities to maximize profits. Now, take action! Lock in the super non-farm payrolls, seize the opportunity of the ICO market, and let our investment portfolio truly enter the fast lane of wealth!

Therefore, I hope that everyone can truly pay attention to every profit opportunity in the current crypto market, especially the super data market, because it is the core key for us to achieve millions or even tens of millions of profits. If you want to achieve your goals more efficiently, the most direct way is to increase the principal invested, so that your funds can truly amplify your returns!

Just imagine, if you trade with \$100,000 and want to achieve a profit of one million, then you need to earn more than 10 times the profit. This is not only extremely difficult, but also requires high risks in the process. In contrast, if your starting capital is \$1 million and you only need to double it to achieve the same goal, which way is easier? Which is lower risk? The answer is obvious. The larger the principal, the more stable and real profits can be earned.

By the same token, in the face of the same profit data, the investment experience of \$1 million and \$100,000 is completely different. The size of the principal determines the mentality, rhythm, results and even the overall investment experience during the transaction process. Those investors who have sufficient funds and dare to invest are more likely to be able to navigate the market and achieve a rapid jump in wealth.

From my personal perspective, I hope that every partner can order the Vanguard AI 4.0 system after achieving one million profits, so that it can become your core tool for continued profits in the future. Currently, more and more partners have begun to pre-order the Vanguard AI 4.0 system, but my goal is far beyond that! I hope that when it is officially launched, it will become popular all over the world and become an indispensable intelligent trading tool for investors, so that everyone can achieve a wealth transition with the power of technology!

We have ambitious goals and lofty ideals, but our top priority is to fully promote the successful launch of Vanguard AI 4.0 and accelerate market deployment through the global regional agent program. The ultimate goal is not only to help strategic partners achieve profits of millions or even tens of millions, but also to enable more people to improve their lives and create the future with advanced technological tools through innovation and action!

Dear friends, I may be more hopeful that you can achieve millions or even tens of millions of profits as soon as possible! Because we need your support, We need your approval! This is not only your personal wealth accumulation, but also the key for us to jointly promote Vanguard AI 4.0 to the world!

Please act now, join a higher-level partner formation, and fight against this week's super non-farm payrolls! This is a golden opportunity that may bring a single profit of more than 600%, and it is an important step towards our greater goal!

Dear friends, once again, warm congratulations to everyone! The deal just now was a big win again! This is not only a successful transaction, but also a perfect reflection of our precise strategy and strong execution!

As the U.S. stock market faces greater uncertainty and is about to experience a sharp correction, we have decisively adjusted our strategy and moved to the crypto market. This is undoubtedly the wisest choice! With the help of precise trading instructions and the intelligent assistance of the Vanguard AI 4.0 system, we not only accurately grasped the market rhythm, but also successfully locked in excess profits! All this proves that our strategy is the most effective and competitive!

Our current core goal is to fully promote the smooth launch of the Vanguard AI 4.0 system. At present, we have invested funds to fully launch publicity work. The ultimate goal is to achieve a true win-win situation with all strategic partners and regional agents! And to do this, we need each of us to focus on doing everything well at the moment!

Special reminder to everyone, this Friday will usher in an excellent opportunity to make a single profit of more than 600%! This is a moment you absolutely cannot miss! In addition, I will also share a blockbuster opportunity to instantly multiply your total assets by 3 to 5 times risk-free! Be sure to attend on time and don't let any moment slip away that could change your destiny! Let us work together to create a brilliant future!

VANGUARD AI 4.0

Good afternoon, team! I'm Milton Reese, your old friend. This morning, we successfully completed a data transaction and once again delivered an exciting report card!

- VIP1 achieved nearly 3 times the return on total assets;
- VIP2 achieved more than 4 times the return on total assets;
- VIP3 broke through 5 times the return on total assets;
- VIP4 even broke the record, reaching 13 times the return on total assets!

Such results are undoubtedly gratifying, and once again proves a fact: as long as we seize the opportunity, we can accelerate on the road to steady profits, keep moving towards our goals, and the realization of our dreams is just around the corner!

Next, all of us will prepare for the super non-farm payrolls this Friday. I hope all friends will be

**EVW Business School**

prepared in advance, ensure that the funds are in place, and don't miss any opportunity that may change your future!

In addition, as mentioned this morning, this afternoon I will share a big opportunity that will allow your total assets to 3 to 5 times without risk! Are you interested in such an opportunity?

Before sharing this opportunity, I would like to ask everyone a question: Have you ever seriously thought about why we need to make enough money and what is the purpose?

Perhaps your answer is: to live a better life, so that your family can live a stable life. Yes, these are all reasons, but they are not enough. Making money is never just an accumulation of numbers, but also a pursuit and realization of the meaning of life.

#### 1. For freedom

Money is not omnipotent, but it can win you the right to choose.

When you make enough money, life is no longer a compromise between "must" and "have to", but a calm "I want". You can decide whether you want to see the world, spend the most important time with your family, or invest in your own interests and hobbies, and no longer worry about tomorrow's daily necessities. And true freedom can only be within reach when you are not trapped by money.

#### 2. For the family

In fact, the reason why we work hard to make money and seize investment opportunities is actually a big part of the reason - for the family.

If you are still young, when your parents are getting old, what do they need most? It is not how often you stay with them and say "I love you", but that you can give them a stable old age. A day without worrying about medical expenses and trivial matters in life. That sense of security is the greatest comfort to parents.

If you have children, look at your children. You see the expectations for the future in your children's eyes and feel pain in your heart.

You don't want them to give up their ideals because of tuition fees, nor do you want them to have no courage to pursue their dreams because of life pressure. You work hard to give them more choices in life, not to live as a copy of you.

Most of the time, making money is not for yourself. We try our best to make the people around us feel more at ease and live a better life. Whether it is parents, children, or partners, seeing their smiles without worries, you will feel that everything is worth it.

So don't say "enough is good enough" anymore. You can make more money and give your family more confidence, this is the meaning of your contribution. Making money is not selfish, but responsibility. Making the lives of those we love better is our lifelong goal.

Making money is never for vanity, but for no regrets. Is life after 50 just about making do? Of course not! 50 is not the end, but the starting point of a new beginning, a stage for you to use your wealth to create meaning for yourself and your family. Making enough money is to make every day of the future more valuable and more selective. You no longer need to hesitate because of money, nor do you need to miss out because you are not ready.

Think carefully about this question, how much time do we have left in this life? 5 years? 10 years? Maybe 20 years? We are not saying this to exaggerate, but the fact is - time is passing. We can't change it, but we can choose how to spend it. We can choose whether to be led by life or take the initiative to control our destiny!

So, ask yourself at this time, do you want to seize the next big opportunity? I believe everyone has been prepared for this week's super non-farm payroll, but what I want to share with all my friends this afternoon is a brand new opportunity! It is different from crypto contracts, it does not require trading, and it does not even have the risks in the traditional investment market! It is very special. Usually this kind of wealth wave only appears at the beginning of the year, which means that there is usually only one wave of opportunities in a year, and it must be an opportunity that only appears in the first year of the bull market. This means that it is very likely that it will only appear once every 3 or 4 years! So this opportunity is very precious.

Are you ready? It is the upcoming ICO project!

Because this opportunity is extremely rare, I must solemnly introduce it to all my friends.

Generally speaking, the issuance of ICO projects is concentrated at the beginning of each year. This time point is very special because it is not only an important opportunity for the exchange center to attract users and start a good start for the new year, but also a key node for all parties' funds and projects to adjust their strategies and plan for the future. The uniqueness of this timing means that there is usually only one high-quality ICO wave every year.

More importantly, the timing for the exchange to issue ICO projects is usually when the crypto market enters a bull market. At this time, market sentiment is high, investment enthusiasm is unprecedented, and the popularity and profitability of ICO projects will be pushed to a new height! This strategy further highlights the scarcity of high-quality ICO projects.

And it is precisely because of this scarcity that whenever such projects are listed, they often trigger a buying frenzy in the market, driving prices to soar rapidly, or even skyrocket!

Historical experience has proven the value of this opportunity time and again: Participating in high-quality ICO projects is like doing a steady business, usually one investment can bring 3 to 5 times the profit!

Such opportunities are extremely rare! Considering the uncertainty of whether there will be a bull market in the future and the remaining years of our lives. For us, this opportunity is a once-in-a-lifetime opportunity! If I miss the ICO project, I can't imagine how regretful I will be.

**EVW Business School**

ICOs (Initial Coin Offerings) are a unique and highly anticipated way to invest in the crypto market. If you're not familiar with ICOs, think of them as the IPOs (Initial Public Offerings) of the crypto space. While they are different markets, their core concepts are very similar.

In an IPO, you have the opportunity to buy shares at a lower price in the early stages of a company and then wait for the value to grow after the company goes public. ICOs offer a similar opportunity: you can buy tokens at a discounted price in the early stages of a project and enjoy a potential leap in value after it goes public!

We have previously summarized the 3 top investment advantages of high-quality ICO projects:

1. High returns and extremely low risks

High-quality ICO projects often have extremely high return potential. In historical data, such investments can easily obtain several times or even more returns.

2. Short participation cycle and low threshold

The investment process of ICO is very simple, and it usually takes only about a week from subscription to completion. Moreover, there is no complicated entry threshold, and almost anyone can participate.

3. 100% guaranteed winning

Unlike IPO, ICO projects do not need to worry about subscription failure or failure to win the lottery. As long as you participate, you can guarantee to obtain tokens, and the amount of income depends entirely on the amount of money you invest.

Dear friends,

In order to let you feel the charm of ICO investment more intuitively, let me illustrate its potential and amazing returns through several specific cases:

Dear friends,

In order to let you feel the charm of ICO investment more intuitively, let me illustrate its potential and amazing returns through several specific cases:

First, let's take a look at a case in the traditional market - AHR, which is one of the top 10 bull stocks in the presidential election, and everyone should know it very well. The company was listed on the New York Stock Exchange on February 7, 2024, with an issue price of only \$12. As of now, AHR's stock price has risen to \$28.7, an increase of 239%! Such performance not only proves the company's own potential, but also allows early investors to obtain rich returns. This is the power of seizing opportunities!

Next, let's look at an example of a crypto ICO project: Our strategic partner BFXCOIN Trading Center issued the platform token BFX in October 2023. The subscription price at that time was only \$0.5. The listing price was \$1.96, an increase of 392%! This is exciting enough, right?

But I have more amazing news to tell you-

As of now, the price of this token has risen to about \$28!

This means that the initial investors have gained a full 56 times!

Dear friends, this is the charm of ICO projects. It not only brings wealth growth, but also gives you the opportunity to make a small investment and gain the possibility of changing your life! Tell me, have you also felt the charm of high-quality ICO projects?

Dear friends, now, as the first ICO project in the first year of the crypto bull market in 2025, the investment value of the GLK project is unquestionable. According to the current situation, the GLK project has released an announcement of its upcoming launch, which means that the subscription will be officially opened soon.

GLK (GenomeLink) is a secure, transparent and decentralized genetic data platform that is committed to deeply integrating blockchain technology with genetic data to create a user-friendly health management ecosystem.

- Scalability problem? Solved!
- Security challenge? Breakthrough!

GLK improves data transparency, security and effective utilization through blockchain technology, and promotes the development of the medical and health field. There is no doubt that this is a top-level technological revolution and a rare high-quality ICO project. The opportunity is at hand, and I call on everyone to prepare in advance and actively participate!

So the question is, how to maximize your investment profits? On Friday, we will usher in the super non-farm payrolls market! Have you ever thought: you can use the profits earned in the crypto contract market to directly participate in the subscription of the GLK project? In this way, you can not only lock in the profits of the contract market, but also convert them into early investments in top projects, realizing the maximum profit amplification!

This is the investment strategy that will make you rich overnight! Dear friends, prepare your positions, we are about to have the opportunity to achieve wealth freedom!
