1. The non-farm payrolls has arrived, are you ready?
2. GLK's subscription progress bar is still rising. How much of this risk-free arbitrage opportunity have you subscribed for?

Good morning, team! I'm Milton Reese, your old friend. Today is another exciting Friday and this Friday is destined to be extraordinary - the heavy data and non-farm payrolls are coming, which will be an excellent opportunity for us to challenge the peak of profitability. Friends, are you ready?

Everyone knows what this Friday's non-farm payrolls means. With last month's non farm payrolls we achieved over 600% of our earnings target. Today we have every reason to expect this record to be refreshed again. Let's wait and see if today's market can make people crazy again!

Now, the most critical question is: are you ready? Faced with such an opportunity that may change the profit curve, we must use 100% execution power, attack decisively, and fully seize this wave of profits!

Dear friends, I will not repeat the analysis of the specific impact of data on the market here today. Regarding this point, I have explained it to you in detail in countless sharings in the past. Now, you just need to understand the most basic logic: reduced non-farm employment means that companies will reduce production and the economy will gradually move towards depression. The sharp increase in non-farm employment means that the employment situation is improving. The increase in employment rate will directly increase consumption capacity and consumption levels, thereby promoting healthy economic development. Stronger economic conditions in turn create more jobs, creating a virtuous cycle.

So the market trend is already very clear. All we need to do is focus on the current transaction and wait for the results to arrive. And I can tell you with confidence that the result this time will definitely not disappoint you!

Everyone, please confirm that everyone has received the trading signal and strictly follow the operating instructions. Every transaction requires our full efforts, because every penny we invest carries our efforts and expectations. Being responsible for your own funds means being responsible for your own life!

Before Trump came to power, we relied on accurate market judgment to launch a strategic partnership plan. Today, some strategic partners have successfully achieved millions of profits, and some have even exceeded tens of millions of profits! This not only verifies the excellent results of our strategy, but also marks that we are one step closer to our dream of successfully launching the Vanguard AI 4.0 system!

EVW Business School

The current market environment is the right time and the right place! The trading center is in the golden period of ICO project issuance, and the crypto market is currently in the bull market acceleration stage under the fourth BTC halving cycle. Against this backdrop, opportunities are fleeting and seizing trends is more important than ever!

At the same time, since Trump came to power, he has quickly fulfilled many of his promises to crypto voters during the campaign, injecting unprecedented confidence into the market. With the implementation of more supportive policies, the crypto market is entering a once-in-a-lifetime golden era.

Standard Chartered's latest prediction is that Bitcoin will rise to \$500,000 during Trump's term, with a market value close to half of gold's total market value! BTC is expected to reach \$200,000 in 2025, rise to \$300,000 in 2026, exceed \$400,000 in 2027, and touch \$500,000 in 2028, with a total market value of \$10.5 trillion. The main driving factors include the Bitcoin spot ETF attracting \$39 billion in inflows, the improvement of the US regulatory environment, and the Trump administration's consideration of establishing a national digital asset reserve. Standard Chartered believes that as volatility decreases, Bitcoin will account for an increased share of investment portfolios, attracting more traditional investors and driving long-term gains.

Friends, are you ready for this wealth craze? We are standing at the starting point of a new round of super bull market, and this time Bitcoin's rise speed and space will exceed history! Now, you have two choices - either take the initiative and seize the trend or wait and see passively and miss the golden opportunity!

Action is always the strongest faith! Adjust your strategy immediately to focus on the crypto market, keep up with our investment pace, and make every effort to seize this wealth storm and make millions of profits a reality!

Facing this round of unprecedented wealth opportunities, we must decisively seize the golden window period of the crypto market! To stand out in this wealth craze, every investor needs to do two things:

Focusing on the current strategic partner program, our primary goal is to quickly achieve revenue goals in the crypto contract market!

As Trump gradually fulfills his promises to the crypto market, crypto are gradually moving towards the mainstream financial system. This means that everyone must actively embrace crypto to avoid being left behind in future trends. What we have to do is not only to participate, but also to be the first to open up new territories!

At present, each strategic partner formation has achieved very impressive income results. However, we must also admit that the core of contract trading is "waiting for opportunities". If there is no suitable market opportunity, we would rather not trade. Only in this way can we achieve steady victory and maximize the advantages of the compound interest model! After all, although contract trading is highly profitable, the market cannot be created out of thin air. We

EVW Business School

must wait for the signal to come.

The second opportunity - ICO project is completely different! Its emergence means that we can take the initiative, grasp the direction of our destiny, and control our own investment future!

Why do you say that?

The unique thing about the ICO project is that it does not need to wait for a specific market trend. Although this opportunity is extremely rare, once it occurs, it is an excellent time to participate in the subscription of high-quality projects. Based on the three top advantages of ICO projects, we can firmly control our own destiny:

1. Generous earning potential

·Listing may bring exponential returns and be realized quickly after the project is launched.

2. Short cycle, no threshold

·From subscription to realization of benefits, it usually only takes a few days, without complicated operations or high threshold participation conditions.

3. Ensure 100% winning

As long as you participate in the subscription, you can obtain a certain allocation ratio and achieve stable investment returns.

The boom in high-quality ICO projects is not a common phenomenon. In the next 5 to 10 years, such opportunities may be few and far between. But precisely because of its scarcity, it is even more precious - once you encounter it, it is a definite investment opportunity!

As long as you participate in the subscription, you can lock in the distribution ratio, thus ensuring the potential returns after listing, and these returns are usually realized quickly after the project is listed.

Breaking news! The subscription progress bar of the GLK project has exceeded 232%! Refreshed my expectations again!

Dear friends, you must know that the GLK project has reached such an astonishing growth rate in just one day from the start of subscription to now! The growth of the progress bar verifies the high investment enthusiasm and scarcity effect of ICO projects! We see its huge revenue potential! There is no risk in participating in the subscription of the GLK project at this point in time! The potential return on winning funds has reached 232%!

If you win the lottery for \$1 million, once it is listed on the market, your book income will become \$2.32 million!

In crypto contract trading, we need to be patient and wait for the market situation, because suitable data and trading opportunities are not always available. The ICO project is different. It allows us to take the initiative and seize the opportunity directly without waiting. If contract trading is us riding the wealth train, then ICO projects are us personally taking control of the steering wheel and driving the wealth express!

And today is only Friday, the GLK project will not be officially launched until next Tuesday! This also means that the GLK project still has great potential for appreciation! Therefore, I call on all my friends to continue to subscribe more and add more subscriptions! This is an opportunity to profit 3 times or even 5 times without risk!

Friends, imagine if there is an investment project that is clear and transparent from beginning to end. You can see with your own eyes the entry of every fund, with nothing hidden and no risks - this is the charm of ICO. The openness, transparency and decentralization of the crypto market make ICO projects a unique investment method that truly guarantees guaranteed profits!

But here's the thing, everyone wants good things, right?

When everyone sees this opportunity, a lot of money will rush in. As a result, your share of the "cake" may become smaller and smaller. For example, you can originally get 10% of the profit ratio, but as more and more people participate, your ratio may be diluted to 1%. It's like a cup of originally strong coffee that becomes lighter and weaker as more water is added.

What to do? We can't let coffee turn into boiled water!

If you want to drink that rich and fragrant cup of coffee, all you need to do is keep adding coffee! Only in this way can the ratio of coffee and water be balanced and the original aroma not be diluted.

The same is true for ICO: the faster the progress bar grows, the more popular the project is and the stronger the potential profit. However, the allocation ratio will also be diluted by more and more funds. If you want to keep your profit ratio from being diluted, you need to add additional subscriptions, stack subscriptions, and lock in your allocation ratio with more investment!

Friends, let us think carefully, what does the emergence of the GLK project mean? Not only is it an opportunity to make steady money, it may also bring super benefits of 3 to 5 times! Faced with such an opportunity, I sincerely appeal to everyone to take decisive action and launch the GLK project!

Why do you say that? The reason is actually very simple. You can ask yourself: In all investment markets, is there a better investment choice than a high-quality ICO?

Let me use NVDA as an example to help you appreciate the value of this opportunity. Do you still remember the performance of NVDA last year? It can be said to be one of the best stars in the US stock market in 2024. From January 1, 2024 to December 30, 2024, it rose by a full 191.82%!

EVW Business School

Now I sincerely ask you: If you could turn back time, would you be willing to sell all your assets and go to Stud NVDA? I believe your answer is definitely yes, because you already know how amazing its growth and earnings are! But today's GLK project is better than NVDA! Did you find out?

It only takes just one week to complete NVDA's entire year's increase!

This means that with the same return and the same risk-free, the GLK project has a shorter capital use cycle and higher profits, completely beating the king of stocks NVDA in both time and space!

Dear friends,

You cannot turn back time and let you go back in time to buy NVDA at a low price, but God loves us. Now, a wave of high-quality ICO projects has emerged just like NVDA a few years ago. This is an investment feast that only happens once in a few years. In the rest of our lives, such a wave of golden wealth may only happen once! And if you miss the GLK project, one day in the future, when you think back to this moment, you may only be left with endless regrets.

But now, destiny has opened a door for you.

What the GLK project brings is not just a return on investment, but an opportunity to transcend time and seize the future!

This is not a time for indecision or caution, but a time for all your energy. Faced with such opportunities, you need to act rather than wait.

So, now is the time to act, take out your spare funds and sell those "junk assets" with limited returns. Decisively participate in the subscription of the GLK project and lock in your super profits!

Dear friends, such an opportunity is rare. Grab it and your future self will thank you for your bold decision today! Your choices today will determine your future life. Please take action now and give your dream of wealth a try!

Feb-72025 EST.

4:00 PM

Michael Foster

1. Make full use of the wealth opportunities of GLK, while continuing to trade crypto contracts to achieve double profits!

Ladies and gentlemen, good afternoon! I'm Michael! Time flies and it's Friday again. In the morning trading, the professor once again led all partners to attack accurately and stop profit perfectly. Congratulations to everyone! Our strategic partner profit plan has entered the final sprint stage. At present, the income of the VIP4 formation has exceeded 1500%, and the income of the VIP1, VIP2, and VIP3 formations is also close to the expected target. All this verifies the accuracy of our trading strategy and Vanguard AI 4.0 system!

So, what is your total asset income? Have you achieved your profit target? If your income has not reached your expectations, please be sure to send me a private message as soon as possible. We will customize the best profit strategy for you based on your account size, trading style and current market trends to ensure that you will not miss the final sprint of this round of wealth frenzy! Time is limited and opportunities are fleeting. Let us go all out and sprint to the final peak income!

Bitcoin is currently in the bull market acceleration phase under the fourth halving cycle, and the trading center has also entered the best window period for the issuance of ICO projects. In this context, it is more critical than ever to accurately grasp the market trend! At the same time, the Trump administration is fully promoting cryptocurrency-friendly policies. Since taking office, he has quickly fulfilled his promises to crypto voters during the campaign and promoted a series of policies conducive to the development of crypto. The market generally believes that with the continuous improvement of the regulatory environment, crypto are entering a super bull market, and there is a huge room for future growth!

The "Bitcoin+" ETF plan promoted by the Trump administration and the acceptance of crypto ETF applications such as XRP, LTC, and SOL by the U.S. Securities and Exchange Commission (SEC) mark the acceleration of the mainstreaming process of the crypto market. Trump Media and Technology Group (TMTG) has submitted a trademark registration and plans to launch ETFs and SMA investment products related to the Truth.Fi platform, and is preparing an initial investment fund of \$250 million, which will be managed by Charles Schwab to further boost market confidence.

At the same time, the participation of Wall Street giants such as BlackRock, coupled with the SEC's accelerated approval of cryptocurrency ETFs, makes the crypto ETF market in 2025 expected to usher in explosive growth. Cboe Exchange submitted four Ripple ETF applications to the SEC in one go, further promoting the expansion of the crypto ETF market to multiple assets. These measures not only provide investors with more diversified investment opportunities, but also mark the key stage of the crypto market towards compliance and institutionalization, and global funds are accelerating inflows. With the improvement of the regulatory framework and the in-depth layout of traditional capital, crypto ETFs will become an important bridge connecting

EVW Business School

traditional finance and digital assets in the future, pushing the entire market into a true golden age!

More notably, Standard Chartered's latest forecast shows that Bitcoin will soar to \$500,000 during Trump's term, with a total market value close to half of the gold market! According to forecasts, BTC prices are expected to reach \$200,000 in 2025, rise to \$300,000 in 2026, break through \$400,000 in 2027, and hit \$500,000 in 2028. More importantly, Standard Chartered believes that as Bitcoin volatility gradually decreases, the allocation ratio of mainstream institutional investors will continue to increase, which will further drive the long-term rise in Bitcoin prices.

Faced with such a clear market trend, opportunities are fleeting, and only action can truly win! The Trump administration's "Bitcoin+" ETF plan, the SEC's regulatory relaxation, and the compliance process of the crypto market all indicate that the crypto market is ushering in unprecedented explosive growth opportunities. At present, global capital is pouring in at an accelerated pace, and the market is at the starting point of a super bull market. Seizing the trend is the key to determining the future wealth pattern!

Because of this, we must not only firmly grasp high-quality ICO projects, but also ensure accurate layout in crypto contract transactions! The current high volatility of the market has created unprecedented profit margins, and favorable policies have further boosted market confidence. Data shows that the daily average volatility of mainstream crypto such as BTC has reached a historical high, which means that trading opportunities and profit margins are growing exponentially. Now is the best time to grasp market trends and implement high-win trading strategies. Only by standing at the forefront of the market can you truly achieve wealth leap!

Yesterday, the GLK project made a strong debut. Let us be excited again and stand at the forefront of investment again. The subscription progress of the GLK project exceeded 200% in a short period of time. The strong market demand has far exceeded expectations and the premium upon listing is almost a foregone conclusion. Such opportunities are hard to come by. The popularity of GLK not only proves the activeness of the crypto market, but also verifies the super high return potential of ICO projects.

Whether a new ICO project is listed has potential or not, it only needs to look at one key point, the practicality of the project and the pain points it solves. A truly valuable ICO project must provide innovative solutions to real-world problems. For example, ETH has completely changed the way blockchain is used through smart contracts, while DeFi projects have broken the barriers of traditional finance. A good project is not just a concept, but can actually promote the development of the industry.

GenomeLink Project: Building a decentralized genetic data sharing platform to promote precision medicine reform

1. Give users control over data and realize data monetization

GLK is committed to building a decentralized platform that allows users to fully control and safely

EVW Business School

share their genetic data. Through the GLK platform, users can not only safely store their genetic data, but also decide whether to authorize third parties for research or commercial purposes, and gain benefits from the use of data. We hope to explore the infinite possibilities of genetic technology through data sharing and community cooperation and help users make smarter decisions in health management. Our vision is to become a leader in the global genetic data market and provide a highly secure, transparent and sustainable data sharing ecosystem.

2. Combining blockchain and AI to create a highly secure intelligent data platform

The uniqueness of the GLK platform lies in the combination of blockchain's decentralized technology and data crypto mechanism to ensure that user data is always secure. We use smart contracts to control data access rights and truly realize users' absolute control over data. In addition, GLK has also integrated artificial intelligence (AI) analysis technology to provide users with personalized health analysis reports on the premise of user authorization, making the application of data more intelligent and efficient.

GLK is not only a decentralized genetic data management platform, but also the core driving force of future medical technology and data economy. Through the combination of blockchain and AI technology, GLK gives users real control over their data, making genetic data a tradable and authorizable digital asset, while promoting precision medicine, personalized health insurance, global medical data sharing and the construction of a health management ecosystem for Web3.0. In the future, GLK will not only help users independently control and monetize their genetic data, but will also assist in AI-driven health trend analysis, transparency of the medical supply chain and even combine with the metaverse to build a virtual health management system, completely subverting the traditional medical model. GLK is starting a digital health revolution, leading the integrated development of the three major fields of medicine, data, finance and creating a smarter, safer and more valuable health ecosystem for global users!

Within just two days of the subscription opening, the progress bar of the GLK project exceeded 200% and the market demand far exceeded expectations, fully demonstrating its huge appeal and development potential. Such a hot scene not only demonstrates the high recognition of GLK among global investors, but also means that early investors will enjoy significant benefits in the short term. High-quality ICO projects are often scarce and the rush to buy GLK that quickly triggered is the best proof that its value has been verified by the market.

Opportunities always belong to those who act quickly. Currently, the market heat of GLK has been ignited. Investors who have taken the lead in layout have undoubtedly occupied the best position for market dividends and for those who are still hesitating, every minute of waiting may mean missing the best time to enter the market. Faced with such a wealth opportunity, this is not a decision that requires complex analysis, but a fleeting opportunity to "pick up money by bending down"! The market has given a clear answer-GLK is the most noteworthy investment project at the moment!

On the second day after the GLK project went online, the subscription progress bar exceeded 200%, which means that the market demand far exceeded expectations, just like a hot new product was sold out in an instant after it was launched and there were even a large number of

EVW Business School

investors waiting in line. This phenomenon not only verifies the potential of the GLK project, but also shows the market's high recognition of its future value.

Compared with traditional IPOs, ICOs are more convenient and efficient and truly achieve "no threshold investment". If IPO means that you have to wear formal clothes, queue up and submit various cumbersome materials to buy an expensive custom red wine at the bank, then ICO is like you can easily buy a cup of hot-selling milk tea by simply opening your mobile phone at home. Simple, direct and without cumbersome processes, everyone can easily participate and is no longer restricted by the complex financial system.

Today's, the craze of ICO projects and the high-frequency trading market in the crypto contract market are intertwined, jointly building a dual opportunity for wealth growth. ICO provides investors with the opportunity to plan ahead and lock in future value, while crypto contract trading allows us to take advantage of market fluctuations and achieve short-term high returns. The combination of these two tracks makes us not only witnesses of the market, but also creators of wealth change.

In the face of such an era dividend, we must act decisively. Take a key step forward and you will not only be a participant in the investment market, but also a pioneer in controlling trends. The opportunity for wealth growth often belongs to those who are good at grasping trends and dare to plan for the future and our business school students are such leaders. You write the future with actions, grasp every market opportunity with wisdom and precision and occupy a favorable position in the global market competition.

This is not just an investment competition, but also a contest of wise men. Choosing to wait and see can only be swept away by the torrent of the times, choosing to act can truly stand on the commanding heights of wealth. We must keep pace with this era, keep moving forward in the wave of technological and market innovation and transform every opportunity into real growth and returns.

Today's sharing ends here. At this proud moment, let us continue to maintain our firm belief, seize every market opportunity with keen insight and courageous action and strive for the goal of millions or even tens of millions of profits! Wealth belongs to those who dare to act and trends will not wait for those who hesitate. I wish you all great success in the next market opportunities and have a happy weekend!

The following is today's interactive Q&A:

1. How much money do you expect to invest to participate in the GLK project and complete the final impact?
2. What are your expectations for the final profit target of the GLK project?
